ACKNOWLEDGMENTS

In loving memory of my Grandfather, Willem Graham, whose love, support, sense of humour and unwavering determination I will forever remember and be inspired by.

I will always be grateful for being able to have called you my Grandfather.

Thank you for everything.

‘So do not fear, for I am with you, do not be dismayed, for I am your God’

Isaiah 41:10

This dissertation would not have been possible if not for the hard work of and time given by many individuals.

To my supervisor, Mrs Stevens, thank for all the assistance and hours spent helping to ensure that I was able to produce this dissertation at the end of the year. I am deeply appreciative and grateful.

To my family, I owe so much to you.

To my sister, Bridget, thank you for always being there for me, for keeping me positive and for being the person with whom I can laugh with for no reason.

And last but certainly not least, to my parents and heroes without whom none of this would have been possible. Thank you for all the love, motivation, patience and inspiration and for always being there for me. Thank you also for all the many sacrifices you both made to ensure that I have been able to achieve what I have over the years. Words cannot describe fully how deeply appreciative I am for everything. Thank you very much.

Chapter 1:

INTRODUCTION

1.1 Key words
Dumping; South Africa; WTO; SADC; EU; Anti-Dumping Agreement; SADC Trade Protocol; Poultry.

1.2 Background and outline of the research problem
In current news, there are many articles being published about a crisis in the local poultry industry with it being unable to compete with cheaper imports, particularly from the European Union (EU) countries.\(^1\) In an article in the Mercury newspaper for 27 February 2017, it was reported that a number of larger companies have started reducing production while other small-scale firms have exited the industry due to the imports.\(^2\) This has resulted in job cuts in large poultry producers, such as Rainbow Chicken\(^3\), which is one of the biggest producers in South Africa.\(^4\) Of concern is that job losses for the industry is currently at a figure of over 3 500 with reports indicating that there will be more in the future.\(^5\) This will only increase the unemployment rate, which was at 26.5\% for the last quarter of 2016.\(^6\) Further effects felt by Rainbow Chicken include a decline in profits of 21.9\% for 2016 from 2015 and a 50\% reduction in the production of the ‘individually quick frozen (IQF) mixed portion’ range.\(^7\) In addition, Rainbow has implemented a decrease in shift numbers at the Hammarsdale plant to achieve profitability again.\(^8\)

\(^{7}\) Mchunu (note 2 above; 13).

\(^{8}\) G Kriel ‘RCL Foods’ financial results reflect impact of poultry imports’ Farmer’s Weekly 17 February 2017 at 16.
The poultry industry is an important one in South Africa for numerous reasons. Importantly, it is a major contributor to the country’s food security as it is the most economical and the main source of animal protein for many South Africans. For such reason, it is the biggest contributor to the country’s agricultural sector. Of interest, is the fact that the industry is part of a value chain and so its problems affect other sectors and producers. This is evident in the poultry industry consuming 40 percent of the country’s animal feed, with soya beans seeing almost all its local production being used in the manufacture of poultry feed. Furthermore, a reduction or disappearance of the country’s poultry industry will not only affect soya beans but also the maize industry. The underlying reasons for such problems facing poultry and its dependents thus need to be addressed to ensure the continued operation of these industries in the economy.

The major reason cited for the problems experienced in poultry is the increased imports over the last few years, mostly from the EU. It has been reported that during

11 DW Boshoff ‘SA Poultry sector and value chain partners negatively affected by government policies’ (2017) 26(1) AFMA Matrix 3.
13 Dunn (note 9 above; 56).
14 In December 2014, a ban was imposed by South Africa on poultry imports from countries where there was an outbreak of ‘avian influenza’ which started in November 2014. The affected states included Canada, United Kingdom (UK), Germany and Netherlands. This resulted in a reduction of imports into South Africa from these states. In December 2016, an outbreak of ‘highly pathogenic avian influenza’ was reported to have broken out in numerous European states. This resulted in South Africa imposing temporary trade bans on poultry imports from Germany, France, Denmark, Netherlands, Poland and Hungary. Furthermore, an outbreak of avian influenza also occurred in South Africa in June 2017, resulting in bans being imposed by Zimbabwe, Botswana and Namibia on imports from South Africa. These factors will not be discussed in further detail due to a word limitation.
the period of 2010 to 2015 imports increased by 90 percent from 240 000 to 457 000 tons per year.\footnote{Davids and Meyer (note 9 above; 22).} It is estimated that this will rise to a high of 530 000 tons.\footnote{Boshoff (note 11 above; 3).} Furthermore, 90 percent of South Africa’s poultry imports are comprised of ‘mechanically deboned meat’ and ‘bone-in portions’, with the latter accounting for the majority.\footnote{Imports of bone-in portions account for 42 percent of all the poultry imports into South Africa. Kapuya (note 14 above; 18).} The EU is the largest exporter of bone-in portions to South Africa, being responsible for 87 percent of the total imported amount.\footnote{Brazil is responsible for the majority of the mechanically deboned meat imports, namely 87 percent thereof. Such figures were averages calculated over the period of 2013 to 2015. Kapuya (note 14 above; 18).} These imports, which enter South Africa duty free\footnote{These products previously entered the country duty free under the Trade, Development and Cooperation Agreement (TDCA) between the EU and South Africa. They now enter duty free under the EPA between the same parties. These two agreements will be discussed further in chapter 4 of this dissertation. Kapuya (note 14 above; 18).}, have been noted by Kapuya as being the ‘most contentious product from a trade policy perspective’.\footnote{Kapuya (note 14 above; 18).} They do however continue to enter the South African market.\footnote{Kapuya (note 14 above; 18).}

These imports are satisfying the local demand for bone-in portions whereas in Europe there is a greater demand for breast meat.\footnote{Davids and Meyer (note 9 above; 25).} European producers can thus sell breast meat for a high price, allowing for other poultry pieces to be sold at ‘competitive prices’ in South Africa to meet the local demand.\footnote{Ibid.} In response to the calls by the industry and other stakeholders, the Department of Trade and Industry (DTI) put together an ‘Action-focused Government Task Team’ to formulate an approach to address the difficulties facing the industry.\footnote{Ibid.} Prior to this, a provisional safeguard duty of 13.9 percent was imposed on poultry imports from Europe by the International Trade Administration Commission (ITAC) of South Africa, responsible for such investigations

and determinations. In addition thereto, anti-dumping duties were also imposed on imports of bone-in portions originating from Germany, United Kingdom (UK) and Netherlands. Another factor contributing to the problems in poultry is the drought which began in 2015, resulting in increased maize and soya prices thus reflecting in higher feed prices. This further increases difficulties.

This situation requires clarity, particularly on South Africa's international trade obligations in relation to international anti-dumping laws and the EU. The aim of the research undertaken is to analyse the current Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade, 1994 (the Anti-Dumping Agreement or ADA) to determine its shortcomings and possible improvements. This is to be undertaken in consideration of the recently concluded SADC-EU Economic Partnership Agreement (EPA). Such improvements must not only promote free trade but also protect and assist vulnerable domestic industries, such as poultry, in developing and least developed states (LDCs) of the Southern African Development Community (SADC), particularly South Africa. Recommendations formulated should be ones that the SADC members can take to the World Trade Organization (WTO) with the objective of encouraging positive change in the ADA.

26 These duties will apply from January to June of 2017. The investigation will be discussed in greater detail in chapter 4 of this dissertation. Kapuya (note 14 above; 19).
28 Boshoff (note 11 above; 3).
29 Mchunu (note 2 above; 13) and Kapuya (note 14 above; 18-19).
1.3 Preliminary literature review and rationale for the study

1.3.1 Literature review

The ADA has come under much scrutiny over the years with various authors criticising it from numerous points of view. It has been described by Gupta and Choudhury as ‘one of the most controversial issues in international trade’.\(^ {33} \) Dumping is defined in Article VI of the 1947 General Agreement on Tariffs and Trade (GATT) as being the state where the;

‘products of one country are introduced into the commerce of another country at less than the normal value of the products’.\(^ {34} \)

The ADA expands on Article VI by providing greater detail on items such as calculation of dumping.\(^ {35} \) This agreement is found in Annex 1A of the Agreement Establishing the WTO, 1994 (Marrakesh Agreement)\(^ {36} \).

The WTO’s history has its origins in the GATT, which controlled world trade between 1948 and 1994.\(^ {37} \) During these years, regional organisations began to form, such as the Southern African Development and Co-ordination Conference (SADCC)\(^ {38} \) in 1980 which was replaced by the SADC in 1992.\(^ {39} \) Ukpe has stated that newly independent African states looked towards regional organisations as a means to achieve development on the continent post-independence.\(^ {40} \) Thereafter authors such as Thomas speak of the occurrences in Europe and North America in the 1990s as being the influence behind new attempts at regional integration amongst the Southern

\(^ {33} \) K Gupta and V Choudhury ‘Anti Dumping and Developing Countries’ (2011) 10 Korea University Law Review 117.

African states. Such events included the signing of the Treaty of Maastricht or Treaty on European Union, which established the European Union, and the founding of the North American Free Trade Agreement (NAFTA). Thomas also cited the political changes in South Africa, Angola and Mozambique as contributors to regional efforts in the 1990s. Carim has stated that the movement towards regional integration stemmed from South Africa’s realisation that its future and development is closely associated with its neighbours. Most of these authors have observed the recent developments in Southern Africa, particularly surrounding the establishment of the SADC in 1992. It is evident that the development of the regional organisation prior thereto, including its predecessor, has not been thoroughly investigated. Research of such developments in relation to the establishment of the multilateral trading system to determine whether a connection exists between the two is lacking. Such gaps will be addressed in chapter two of the dissertation.

The ADA has faced many criticisms especially since its increased use in recent times, which Prusa has associated with the rise in WTO membership. In another article by Prusa it was stated that the ADA is misused as it is an ‘extremely flexible and timely instrument’, thus capable of wide interpretations. Furthermore, such author also finds that dumping complainants often succeed having produced sparse amounts of evidence for investigation. The ADA provisions have also been described as ‘vague and ambiguous’ by authors such as Lekfuangfu. Writers, Gupta and Choudhury, state that such characteristics are often taken advantage of by developing countries, with Tharakan regarding the measurement of the injury margin as being the frailest

43 Thomas (note 41 above; 105).

49 Ibid.
51 Gupta and Choudhury (note 33 above; 117).
point in the anti-dumping structure.\textsuperscript{52} Writers have also criticised the basis of the determination of dumping, arguing that a below normal cost price does not always result in distortions in importing markets.\textsuperscript{53} Barfield claimed that price variances could also be the result of various prevailing marketplace conditions.\textsuperscript{54} This research resonates with the sentiments of other writers as noted by Barfield.\textsuperscript{55} It has been argued that investigators need to consider that plausible explanations other than a dumping motive can exist for goods being imported at lower costs than in their domestic markets.\textsuperscript{56}

Proposed solutions to such issues raised include ‘more balanced procedures’ for the calculation of key aspects such as dumping and the margins.\textsuperscript{57} Barfield maintains that a connection between the alleged market distortion and damaging dumping caused by the lower prices should be established by the applicants before duties are imposed.\textsuperscript{58} While the authors have looked at the ADA specifically and noted various solutions to the associated problems, there is a lack of focus on the Agreement in relation to the SADC industries. This new perspective will be investigated further in the dissertation to provide constructive criticism and solutions for proposal by the SADC to the WTO.

Moreover, the EU’s approach to trade is based on ‘maximising internal development’.\textsuperscript{59} According to Franicevic, such is accomplished through adoption of a ‘multilateral liberalisation approach’ to non-EU member policies and a ‘regional integration approach’ towards its interior trading plans.\textsuperscript{60} Franicevic states that such internal policy has resulted in an influential amount of global trading authority being gained by it.\textsuperscript{61} The EU uses trade with other countries as a means to develop its own markets.\textsuperscript{62} This is made possible through regional organisations, which Holland states it encouraged

\textsuperscript{62} Ibid 203.
and focused on after its own formation. Against this backdrop, in a study by Issabekov and Suchecki it was found that 70 percent of the EU’s anti-dumping proceedings initiated by it related to products where it no longer had an element of market leverage or ‘comparative advantage’ in or were failing to hold onto. The literature reveals that the trading policies of the EU do inform its actions but the extent to which such views have been tested in relation to the SADC-EU EPA is yet to be explored.

In connection with the SADC, Hurt has argued that concluding an EPA with the EU will ‘lock in the neoliberal development model’ thus assisting the EU to ascertain and assert dominance in the region. This argument was made for two reasons, first that such model will decrease the freedom of states to conclude policies of their choice and that it interferes with the attainment of regional integration as economies cannot be diversified. It appears as though the relationship between the EU and SADC has been observed from the perspective of the trade policies that each organisation possesses but not from the perspective of the ADA. The arguments proffered by such authors will inform the analysis of the effect of the ADA on this relationship.

Further, the literature examined indicates that there are gaps in the knowledge, most notably in relation to the SADC and the SADC-EU EPA. This dissertation will look at such gaps and attempt to draw associations not previously considered, such as between the formation of the multilateral trading arrangement and regional communities. It will thus form an integral part of the present available knowledge.

1.3.2 Rationale for the study

An interest in the topic was sparked upon observation of the events unfolding in the newspapers and after hearing talk about poultry that was to be imported from the United States of America (USA) under the African Growth and Opportunity Act (AGOA). Upon further research, it was discovered that poultry imports from the EU were of a greater level and thus concern when compared with those from the USA. A great interest in the matter has thus developed and I intend to pursue it further in order

---

63 Holland (note 38 above; 264).
66 Ibid.
to determine a way forward for all states concerned. Such research is important given that workers in the sector are currently being retrenched, thereby increasing South Africa’s unemployment rate.\textsuperscript{67} Retrenchments prevent people from actively participating in the economy and promoting its growth.\textsuperscript{68} This is true not only for South Africa but other SADC members too as such occurrences negatively affect growth and development in the region.\textsuperscript{69} This dissertation will shed light on the anti-dumping laws, relations with the EU and make recommendations as to how the ADA as a whole can be improved while allowing SADC states to protect their vulnerable industries.

1.4 Statement of purpose

The purpose of this study is to analyse the ADA with particular focus on its implications on the SADC-EU relationship and to formulate recommendations for its improvement with emphasis on the SADC countries’ poultry sectors, particularly that of South Africa.

1.5 Research questions

i. How has the development of the multilateral trading system (since the GATT) affected the proliferation of regional trade organisations with particular focus on the SADC members?

ii. To what extent has the implementation of the ADA affected the particular poultry industries within the SADC, with specific focus on South Africa?

iii. To what extent has anti-dumping practices affected the SADC-EU relationship, in lieu of the current talks on the formation of EPAs?

\textsuperscript{67} ‘Media release: Quarterly Labour Force Survey – QLFS Q4: 2016’ (note 6 above) and Mchunu (note 2 above; 13).

1.6 Principal theories underlying the study

There are numerous theories influencing the research but the main one underlying it is legal positivism in respect of international trade and economic law.\textsuperscript{70} This theory is centred on the organ responsible for making the law, such as a Parliament.\textsuperscript{71} The law is observed and scrutinised from both a ‘descriptive’ and ‘morally neutral’ manner.\textsuperscript{72} If a law is produced by following the correct steps, then it can be regarded as genuine even if it is unjust.\textsuperscript{73} A person’s rights are thus determined with reference to the laws that govern them.\textsuperscript{74}

Positivism advocates for the criticism of law to be done by scrutinising those institutions responsible for producing and imposing it.\textsuperscript{75} In terms of this theory, there are distinct markers to determine whether a law is indeed a law.\textsuperscript{76} The legal validity of all laws produced is found in the ‘Rule of Recognition’ which is regarded as being the criterion for validity.\textsuperscript{77}

This research will be centred on scrutinising and critiquing the ADA from various perspectives. The validity and morality of the law will not be questioned. The propositions for the improvement of the ADA will primarily be directed towards the WTO, which is responsible for the formulation of law on a multilateral level.\textsuperscript{78} This approach is in line with the Positivist Theory.

There are a number of economic theories that will be considered throughout the dissertation. Mercantilism is a theory that was developed in the 16 and 17\textsuperscript{th} centuries and was centred on the idea that the influence of a state could only be enlarged upon accrual of national wealth, of which there was a certain amount.\textsuperscript{79} Such was attainable through the gathering of ‘precious metals’ and a rise in exportation of goods

\begin{flushright}
\textsuperscript{70} All these theories mentioned will only be considered to a limited extent in this dissertation.
\textsuperscript{72} A Tutt ‘The Improbability of Positivism (2014) 34(2) Pace Law Review 567.
\textsuperscript{73} ‘Legal Positivism vs. Natural Law Theory’ (note 71 above).
\textsuperscript{74} Ibid.
\textsuperscript{75} Ibid.
\textsuperscript{76} Ibid.
\textsuperscript{77} Ibid 568.
\end{flushright}
produced.\textsuperscript{80} This resulted in the overproduction of certain products beyond the demands of the consumers, leading to depressions in economies.\textsuperscript{81}

Another notable theory, the Absolute Advantage Theory, was proposed by Adam Smith in his publication entitled ‘Wealth of Nations’ in 1776.\textsuperscript{82} It was argued that a nation can only profit from its exports if the needs of its people are satisfied by imports as a nation does not have to manufacture all the required goods by itself.\textsuperscript{83} He went on further to say that they should rather produce those goods for export in which they have an ‘absolute advantage’\textsuperscript{84}, namely that they are the best at producing.\textsuperscript{85} Conversely, in terms of the Comparative Advantage Theory, developed by David Ricardo, a country ought to produce those goods that it can do so cheaper although they do not have to be the best at it.\textsuperscript{86}

The dissertation will also consider, to a limited extent, the free trade and protectionist theories which have developed from the above basic theories underlying international trade law. The free trade theory encourages specialisation in the production of goods that the country can best produce while it trades with others for the remaining goods required.\textsuperscript{87} Such trade between countries must not be impeded by quotas, trade barriers or other methods that prevent the free flow of trade.\textsuperscript{88} It is believed that the implementation of this theory will not only increase the standard of living for many but also provide the opportunity to purchase goods and services that would otherwise not have been possible.\textsuperscript{89} On the contrary, Protectionism involves the use of policies by

governments aimed at limiting its international trade to protect their local businesses from outside opposition in order to maintain ‘national security’.  

1.7 Research methodology

In this thesis, desktop research will principally be undertaken. A legal analysis focused on the WTO’s ADA will be completed. Other primary sources to be considered include the SADC-EU EPA, the Protocol on Trade in the Southern African Development Community Region 1996 (SADC Trade Protocol) and Regulation (EU) 2016/1036 of the European Parliament and of the Council of 8 June 2016 on protection against dumped imports from countries not members of the European Union L 179/21 (EU Anti-Dumping Regulations). Furthermore, the founding treaties of the SADC, namely the Treaty of the Southern African Development Community, 1992 (SADC Treaty) and the Treaty on the Functioning of the European Union 2012/C 326/01 will also be considered in the dissertation. The secondary sources to be consulted include a wide range of journal articles, textbooks, working papers, website documents, trade briefs, newspaper and magazine articles. Due to the research being desktop based, there will be no ethical concerns related thereto.

1.8 Structure of dissertation

Chapter one will comprise of the research proposal outlining the problem as well as the questions to be answered in order to address the main problem highlighted.

Chapter two will be centred on the question of how the development of the multilateral trading system has affected the SADC members.

---

Chapter three will explore the extent to which the ADA has affected the poultry industries within the SADC EPA group.\textsuperscript{95}

Chapter four will determine the extent to which the anti-dumping practices have affected the SADC relationship with the EU in light of the current talks on the formation of EPAs.

The final chapter, chapter 5, will contain the findings of the research and draw conclusions and recommendations from it in order to answer each sub question and finally the main research question.

1.9 Concluding remarks

The aim and objective of this dissertation is to analyse the ADA, its implementation by the SADC and EU and the impact thereof on their relationship and SADC states’ poultry sectors, primarily South Africa. The conclusion of the EPA will also be considered in the assessment of the status of such relationship and the suitable recommendations formulated thereafter.

\textsuperscript{95} Members of this group include South Africa, Botswana, Namibia, Lesotho, Swaziland and Mozambique. Angola has the option to join. ‘Southern African Development Community (SADC)’ available at http://ec.europa.eu/trade/policy/countries-and-regions/regions/sadc/, accessed on 15 July 2017. See Annexure A for further details on all the SADC members.
Chapter 2:

THE EFFECT OF THE MULTILATERAL TRADING SYSTEM ON THE DEVELOPMENT OF THE SADC

2.1 Introduction

In this chapter, the history of the world’s multilateral trading system will be traced back to the GATT, the Bretton Woods Institutions especially the International Trading Organization (ITO), the WTO and the rounds of negotiations engaged in over this period. This will be undertaken to determine how the development of the multilateral trading system has affected the emergence of regional organisations in Africa, with particular focus directed towards the SADC. In relation thereto, advances in the area of anti-dumping within the multilateral stage over the years will also be addressed.

2.2 Historical background of the ITO, GATT and WTO

2.2.1 The development and demise of the ITO

On 21 November 1947, the United Nations (UN) Conference on Trade and Employment (Havana Conference) commenced in Havana, Cuba.96 It saw the participation of over 50 countries, where the aim was to create the ITO.97 From this conference, the Havana Charter for an International Trade Organization emerged and was subsequently approved by the parties.98 They hereby promised to abide by a collection of rules governing international trade.99 This was the result of a belief that the existence of such rules would help instil ‘stability and well-being’ into the trading system, being a necessity for the existence and persistence of nonviolent relations amongst states.100

---

97 ‘Understanding the WTO: Basics, The GATT years: from Havana to Marrakesh’ (note 37 above).
99 Bidwell and Diebold (note 98 above; 189).
The ITO was meant to be the third component of the ‘Bretton Woods Institutions’ and a ‘specialized agency of the United Nations’. The other Bretton Woods Institutions established at a conference held in Bretton Woods, USA, in 1944, were the International Monetary Fund (IMF) and World Bank (WB). The ITO was formulated with the aim of regulating international trade, with the GATT functioning within it as the rules controlling the trading policy in the ITO’s Charter.

The functions of the ITO included promoting and enabling talks between contracting parties, undertaking research and advancing trade and investment agreements while gathering data relating to global trade, tariffs and business’ operations. Four bodies were developed to carry out such functions, namely the Conference, Executive Board, Commissions and administrative staff. However, despite the progress made in formulating this organisation, it did not materialise due to opposition by the USA.

The Congress of the USA did not ratify the Charter in the years following its creation, thereby effectively ending its life. Its concerns related to the large amounts of ‘regulation and planning’ that would accompany the complete implementation of its provisions and the inadequate protection of ‘private foreign investment’. Its main objection was that it would no longer have control over nor be able to determine its foreign trade and resource advancement as such power would be held by the ITO. Additionally, its apprehensions were also premised on the fact that it would not have possessed a degree of voting influence allowing it to guard its ‘interests’. This is because each member state would only have been allocated one vote and no veto rights in the Conference, which was to be the policy formulating body of the ITO.

110 Ibid 231.
111 Ibid 229 and 231.
Despite this setback, states persisted with the aim of founding such an institution.\footnote{112} There was an additional attempt at establishing one similar to the ITO a few years later when the Agreement on the Organization for Trade Cooperation was put forth in 1955.\footnote{113} Despite it being ‘less ambitious than the ITO’, it was again not accepted by the Congress of the USA.\footnote{114} Due to this, the GATT had to continue to exist by itself thereafter.\footnote{115}

2.2.2 The GATT

As alluded to above, the GATT was an international agreement which came into effect on 1 January 1948 with 23 contracting parties.\footnote{116} It contained the rules by which international trade would be conducted, with the most important ones being the National Treatment and Most Favoured Nation (MFN) principles.\footnote{117} These were aimed at avoiding events that occurred between the World Wars, such as the Great Depression, through the creation of a trade system grounded in rules and non-discrimination between states.\footnote{118} Its development was also facilitated by the realisation that liberalisation of trade would assist in post-World War II ‘recovery and reconstruction’.\footnote{119} Of interest is that the GATT was originally intended to be provisional, pending approval of the Havana Charter and establishment of the ITO.\footnote{120} In anticipation of the ITO’s development, the GATT did not encompass extensive means by which it could be executed.\footnote{121} This however did not seem to deter states from relying upon it in the following years.\footnote{122}
2.2.3 The GATT years and rounds of negotiations

This temporary agreement, the GATT, went on to regulate global trade from 1948 through the provision of rules for 47 years.\textsuperscript{123} It was ratified indefinitely by consent following the failure of the US to adopt its Charter.\textsuperscript{124} Just like the ITO, the GATT itself also promoted the principles of identical treatment, ‘reciprocity’ and ‘multilateralism’.\textsuperscript{125} These would be incorporated and promoted during the eight rounds of negotiations that took place over the years up till 1994.\textsuperscript{126}

The first five rounds of the GATT negotiations, from 1947 to 1961, focused solely on tariff decreases.\textsuperscript{127} The initial round saw 45 000 concessions in tariffs being agreed upon, affecting trade to the approximate value of US$10 billion.\textsuperscript{128} In the rounds subsequent to 1961, other topics were incorporated into the agendas.\textsuperscript{129} Issues such as development and anti-dumping were discussed in the Kennedy Round lasting from 1964 till 1967.\textsuperscript{130} The Tokyo Round, which ran from 1973 to 1979, featured discussions on non-tariff barriers with agreements in this respect being passed by the parties.\textsuperscript{131} These agreements were only accepted by a minor number of developing countries though.\textsuperscript{132} The final round, known as the Uruguay Round that ran from 1986 to 1994, brought great changes most notably the establishment of the WTO through Article I of the Marrakesh Agreement.\textsuperscript{133} This Agreement included the GATT of 1947, thus making the WTO the latter’s administrator.\textsuperscript{134}

The WTO is premised on the principles of members not discriminating against one another in relation to products, the opening up of trade and ensuring certainty,
foreseeability and prioritisation of the safeguarding of the environment. Furthermore, the WTO aims to assist developing countries in their efforts to integrate into the global system. Its main functions include determining disputes relating to trade, facilitating negotiations on trade matters and supervising the implementation of WTO Agreements.

2.2.4 Successes of the GATT

The GATT enjoyed many achievements over its years of implementation. Most notably was its contribution to the reduction of trade barriers. Such success in the 1970s and 1980s was however noted to have culminated into the use of various forms of protection by states for their industries, such as subsidies for agriculture. Despite this, tariff reductions helped increase growth rates of countries as seen in the 1950s and 1960s where their average growth was eight percent. As trade became more liberalised over the years and WTO membership increased, so authors have associated this with increased use of anti-dumping measures by states.

2.3 Development of anti-dumping laws over the years

2.3.1 Reasons for anti-dumping laws in multilateral trading system

Currently, dumping is defined in article 2.1 of the ADA, which regulates dumping alongside Article VI of the GATT. The main reasons for its presence in our global trading system today is the recognition that dumping has the potential to alter ‘market fundamentals’, create unfair trade and competition and confer damaging results on the

137 Ibid.
138 Srinivasan (note 96 above; 202).
139 ‘Understanding the WTO, What we stand for’ (note 135 above).
140 Ibid.
142 Article 2.1 of the ADA defines dumping as the situation where a product is ‘introduced into the commerce of another country at less than its normal value, if the export price of the product exported from one country to another is less than the comparable price, in the ordinary course of trade, for the like product when destined for consumption in the exporting country’.
public, local producers and governments. One can argue that this is contrary to the main objectives of the WTO.

As such, Article VI of the 1947 GATT saw the inclusion of the anti-dumping trade remedy for the first time in an international agreement although initially its insertion was not planned. Leading up to such time, eight countries around the world had already incorporated anti-dumping rules into their legal frameworks. The intention behind its eventual inclusion in the GATT was to provide guidance on the response that states should take to dumping. This article gave states the right to levy anti-dumping duties against another. They were only required to apply this article to the greatest degree where it did not conflict with their own anti-dumping laws. Pangratis and Vermulst thus argued that contracting parties who had such laws in place were favoured as they could avoid applying Article VI, which was viewed as being stricter. However, over the following GATT negotiation rounds attempts were made to further modify it in response to concerns raised.

2.3.2 Anti-dumping Code of the Kennedy Round

Interestingly, in the Kennedy Round of the GATT negotiations, the 1967 Agreement on the Implementation of Article VI (1967 Code) was formulated and became effective

on 1 July 1968.\textsuperscript{153} States viewed it as an expansion to the Article.\textsuperscript{154} This development was necessary to address concerns that the Article was being used by states as a means to protect their industries and trade.\textsuperscript{155} Additionally, its provisions were being subjected to varied interpretations and applications.\textsuperscript{156} This resulted in contracting parties complaining that industries were unable to gain access to markets, such as that of the USA, on a fair and economical basis.\textsuperscript{157} Member states were thus calling for an extension to Article VI, which would include definitions of key terms such as ‘industry’.\textsuperscript{158} More so, parties wanted procedures with considerations that had to be utilised by states in anti-dumping matters in the hope that it would bring predictability and fairness to the area.\textsuperscript{159}

As such, the Code addressed many issues relating to Article VI.\textsuperscript{160} In its preamble, the commitment to providing an interpretation for the Article and rules necessary for its implementation to achieve ‘certainty’ and ‘greater uniformity’ were highlighted.\textsuperscript{161} Key terms, such as ‘industry’ and ‘like product’, were defined in articles 4(a) and 2(b) respectively.\textsuperscript{162} Furthermore, concerns relating to procedures for its implementation were addressed as evident in article 10(a) which required an initial finding of both dumping and injury before provisional duties could be imposed.\textsuperscript{163} Article 11 levied limitations on the use of retrospective duties while article 6 introduced rules relating to evidence and confidentiality.\textsuperscript{164} Importantly, article 3(c) incorporated the requirement of a causal link between dumping and injury having to be established before a duty

could be imposed. The Code required dumping to have been ‘demonstrably the principal cause of material injury or threat of material injury to a domestic industry’. This result also had to be considered in light of the other factors which contributed to the injury being felt. Considering these inclusions, positive responses were yielded from states.

This Code was regarded as a success in numerous respects. First, it was seen as encouraging fair competition and thus increases in trade. This was due to the coordination between the states’ anti-dumping legislation and the procedures developed at international level, which would ensure consistency in application of such law. Secondly, it was viewed as an indication that non-tariff barriers in trade were going to be removed in the future. Anti-dumping was regarded as a non-tariff barrier during such time. Despite these achievements, concerns arose over the following years.

2.3.3 Anti-dumping Code of the Tokyo Round

Prior to the next round of the GATT negotiations, the Tokyo Round, issues developed around the implementation of the 1967 Code. These arose from the commitment made by signatories to ensure that their national laws reflected the Code’s requirements. The Congress of the USA opposed this, in particular to altering its laws and reducing the authority and discretion enjoyed by its local administering authorities. The European Community (EC) stated that the United States Tariff Commission was not considering the 1967 Code in the application of their Antidumping

177 Ibid.
Act of 1921. As the EC sought compliance by the USA, they insisted on the 1967 Code being readdressed during the next round. Furthermore, it also wanted its concerns relating to the causation requirement of that Code to be addressed, namely that it was too strict, thereby reducing ‘administrative discretion’.

Thus, in the Tokyo Round of the GATT negotiations two agreements relating to Article VI were formulated and came into existence on 1 January 1980. These were the 1979 Agreement on Implementation of Article VI (1979 Code) and the Agreement on Interpretation and Application of Articles VI, XVI and XXIII (the Subsidies Code). The latter dealt primarily with the application of countervailing duties and subsidies in an attempt to decrease non-tariff trade barriers. Due to the Subsidies Code, and the fact that similarities existed between countervailing duties and dumping in relation to procedure and injury determination, changes were to be made to the 1967 Code to make it compliant with the former.

Many variations to the Agreement resulted from this Round, most notably in areas of injury calculations and the causal link required between dumping and injury. For injury, the necessities for determination were altered to require instead that ‘dumped products are, through the effects of dumping, causing injury’. At the same time, it was required that additional factors, also causing injury, were not to be accounted for in determining injury produced by dumping. This was criticised for being in line with

the USA’s existent position and rendering the calculation of injury not as demanding.\textsuperscript{188} Pangratis and Vermulst argued that this, along with the change in the definition of ‘regional industry’, resulted in a ‘more protectionist approach to anti-dumping measures’ being adopted.\textsuperscript{189}

Another significant change in the 1979 Code was the introduction of provisions which took cognisance of developing countries’ needs.\textsuperscript{190} Article 13 required members to consider using alternative solutions contemplated by the Code before implementing and enforcing anti-dumping duties against developing ones.\textsuperscript{191} This had to be adhered to especially when implementation of duties would affect the ‘essential interests of developing countries’.\textsuperscript{192} In their research, Trebilcock and Howse highlighted that this provision had at that time not found its way into the national anti-dumping laws of the developed nations, which would have been concerning for developing states.\textsuperscript{193}

### 2.3.4 The ADA of the Uruguay Round

Noting the tense situation in this area, proposals for changes to the 1979 Code were raised at the initiation of the Uruguay Round of negotiations.\textsuperscript{194} This was due to various issues, such as its ‘incompleteness’ and ‘ambiguities’, which according to Trebilcock and Howse resulted in states having varied ‘antidumping practices’.\textsuperscript{195} When negotiations began, it was characterised by opposing demands of developed and developing states.\textsuperscript{196} While developed ones called for flexibility in the anti-dumping laws, developing ones wanted ‘more discipline’.\textsuperscript{197} This culminated in a delay of approximately two years in concluding the Round.\textsuperscript{198} At the end, the ADA was produced and entered into force on 1 January 1995.\textsuperscript{199}

\end{itemize}
\end{footnotesize}
The notable changes introduced in this Agreement, although described as a compromise, concerned anti-dumping procedures.\textsuperscript{200} Article 5.8 of the ADA introduced the \textit{de minimis} standards, whereby investigations have to be ended immediately once determined that the actual or potential dumped imports in question are below the ‘negligible’ level.\textsuperscript{201} In addition, article 3.3 allows for the practice of cumulation in certain instances, such as in the determination of dumping wherein an investigating authority is permitted to include imports of all states against whom complaints have been made.\textsuperscript{202} The parties to this Agreement now include all the WTO members who accepted the Marrakesh Agreement as Annex 1A thereof contains the ADA.\textsuperscript{203} Extensive use of this instrument by members of free trade agreements, established under Article XXIV of the GATT, has been noted by James.\textsuperscript{204}

\textbf{2.4 Proliferation of regional trade organisations}

\textbf{2.4.1 Article XXIV of the GATT}

Associated with the dumping concerns, is the establishment of Regional Trade Agreements (RTAs), regulated by Article XXIV which entails the formation of either a customs union (CU) or free trade area (FTA).\textsuperscript{205} Requirements for establishment thereof are that ‘substantially all trade’ between the members concerned is free and that tariffs in relation to non-members should not be higher than those which existed prior to formation.\textsuperscript{206} Such agreements are expressly allowed under this provision as they would otherwise violate articles I and III of the GATT.\textsuperscript{207} These agreements have developed over the years from dealing mainly with goods and services trade to now encompassing areas of labour, global investment and ‘environmental standards’.\textsuperscript{208}

\textsuperscript{208} Srinivasan (note 96 above; 205).
2.4.2 Waves of regionalism

The growth in RTA numbers has been noted as having occurred predominantly in two ‘waves of regionalism’. Mansfield and Reinhardt state that the first was in the 1950s to 1970s period and the second in the 1990s. These coincide with the periods of ‘post colonialism’ and ‘post communism’ respectively. To date, every WTO member is party to at least one RTA.

Africa has not been spared from such RTA growth over the years. On this continent, they have been viewed as a means to encourage growth economically and influence the formation of trade terms internationally. Trade, as promoted by RTAs, has thus been identified as key to achieving ‘political stability’, improved governance and ‘competitiveness in the international market’. However according to Bhagwati, such RTAs simply contributed to the global ‘spaghetti bowl proliferation’ of these arrangements.

2.4.3 Reasons for growth

Numerous motives have been offered for this great growth, with some being associated with the GATT and WTO. It has been argued that increases in the WTO membership has resulted in a consequential reduction in the influence that states possess within the multilateral system. Thus, RTAs have been viewed as a way for states to avoid being exploited in this system due to such minimal influence. They

210 Ibid.
215 Darku and Appau (note 211 above; 47).
217 Mansfield and Reinhardt (note 209 above; 834).
218 Ibid 838.
can also be used as ‘insurance’ in the event of various ‘failures’ occurring at the WTO, including negotiations not being completed on time or states not attaining the results desired in key sectors of trade.\textsuperscript{220} Additionally, RTAs can help ensure that barriers to trade are not later ‘unilaterally’ raised by a state’s trading partners.\textsuperscript{221}

Authors have also noted that the WTO itself encouraged the conclusion of RTAs as it viewed them as being equally important alongside the multilateral trading administration.\textsuperscript{222} Its failure on the other hand to ensure compliance with Article XXIV has been viewed as possibly contributing to their recent growth.\textsuperscript{223} Attempts to rectify this situation were made by the WTO, especially after the Uruguay Round where the Understanding on Article XXIV was produced.\textsuperscript{224} In terms of this Understanding, the Committee on Regional Trade Agreements (CFTA) was created to supervise such agreements while the Dispute Settlement Understanding was rendered applicable to RTAs too.\textsuperscript{225} According to Picker, such developments have not been successful as compliance with this Article has not improved, partly due to the ‘technical’ nature of the Understanding’.\textsuperscript{226} This compliance issue extends back to the GATT years as only one judgment was reached on a RTA’s conformity with Article XXIV.\textsuperscript{227} The reason for this is the varied views of members on ‘what constitutes compliance’ therewith.\textsuperscript{228} Over and above such reasons for the RTA growth, there is also the pursuit of security goals and political influences that influence the formation of such agreements.\textsuperscript{229}

With the increases in RTAs, numerous issues have arisen as well as advantages highlighted.\textsuperscript{230} Most notable are concerns relating to the WTO, whereby such agreements are regarded as hindering the development of the multilateral system.\textsuperscript{231} According to Picker, RTAs are attracting the investment of states’ resources away from

\textsuperscript{231} \textit{Ibid}.
the WTO, such as their government officials.\textsuperscript{232} This creates difficulties especially during negotiations.\textsuperscript{233} Furthermore, Bhagwati has argued that trade is being made chaotic with RTAs as they concentrate states’ attention on the ‘nationality of goods’.\textsuperscript{234} Coupled with this are anxieties over distortions of universal resource allocations by RTAs as cheaper producers in non RTA members are not traded with due to such commitments.\textsuperscript{235} This practice reduces the competitiveness of non-members’ products as argued by Mansfield and Reinhardt.\textsuperscript{236} These would be concerning for the WTO.\textsuperscript{237}

Conversely, for developing countries RTAs present the opportunity to collectively utilise their available resources and voice their views to other WTO members in order to benefit from participation in the multilateral system.\textsuperscript{238} Such benefits could include them influencing the content of trade terms formulated at this level, thus improving their position in the global market.\textsuperscript{239} This can greatly assist in ensuring a faster integration pace for such states.\textsuperscript{240} The reduction of tariffs that comes with the conclusion of RTAs, especially in the form of a FTA, can also assist to increase a state’s trade.\textsuperscript{241} The fact that intra-regional trade, measured as a portion of the total global trade, has increased from 28 percent in 1990 to 50.8 percent in 2008, is not only evidence thereof but also influences states to view RTAs as a means to attain such goal.\textsuperscript{242} The conclusion of such agreements has also been found to be easier than those on the multilateral level, given that the parties will often have mutual interests at regional level.\textsuperscript{243} The issues around such growth are still pressing though.\textsuperscript{244}

2.4.4 Proposed solutions

In order to address the concerns relating to the rapid RTA growth, certain writers have put solutions forward, such as Bhagwati.\textsuperscript{245} He has proposed that the conclusion of a free trade agreement involving ‘hegemonic’ powers, such as the USA, should only be allowed in two circumstances.\textsuperscript{246} First, where it will be used to form a ‘common market’ with a ‘common external tariff’ and secondly where it is the only means to attain ‘multilateral free trade’ between the states concerned when WTO negotiations have halted.\textsuperscript{247} This will ensure that such agreements are only used when they can contribute towards the development of the multilateral trading system.\textsuperscript{248} Trebilcock and Howse have echoed calls for stricter rules governing the formation of RTAs and for Article XXIV to be subjected to sterner interpretation and application.\textsuperscript{249}

2.5 Factors influencing the development of the SADC

2.5.1 Developing countries in the GATT and the UNCTAD

From the 1960s, the numbers of developing countries becoming signatories to the GATT was increasing primarily due to many being granted independence from colonial rule during this period.\textsuperscript{250} While their contributions to global trade grew during the 1960s and 1970s, they were not satisfied that they had any power over the content and application of the GATT rules.\textsuperscript{251} Calls for greater ‘preferential treatment’ in relation to such rules were also made by them.\textsuperscript{252} Against this backdrop, the UN Conference on Trade and Development (UNCTAD) was established in 1964, taking the form of a conference where UN members would meet intermittently.\textsuperscript{253} A forum was also established where developing countries could play a more active role in the making of GATT related decisions.\textsuperscript{254} The UNCTAD was thus utilised as a means to pressurise developed countries to ‘liberalise trade unilaterally with developing

countries’. Success in this regard was seen with the inclusion of part IV to the GATT in 1965, focused on ensuring GATT requirements were lax thus allowing developing states to ‘pursue inward-looking growth policies’. This forum permitted developing members to use their numbers to put their views and opinions across and to exert some influence over developed ones. This is somewhat indicative of the position of developing members in the multilateral system at this time.

2.5.2 Development and influence of the OAU

The 1960s also saw the development of the Organisation of African Unity (OAU) in 1963. Its goals included encouraging ‘African solidarity’, ending colonialism in African countries and attaining cooperation between states economically. While Darku and Appau have found that the SADCC did not make a substantial contribution to economic cooperation amongst members, they argued that it had a great influence on the formation of the SADCC and other RTAs. This was due to its aims of solidarity and ending colonialism. The association between these two organisations is especially evident when viewed in light of the fact that the SADCC worked towards ending Apartheid in South Africa.

2.5.3 The SADCC

The SADCC was the predecessor of the SADC known today. Its formation has been linked to both external and internal influencing factors, including the founding of the UNCTAD and OAU. The SADCC was officially established on 1 April 1980 through the ‘Lusaka Declaration “Towards Economic Liberation”’ formulated at a summit in

Lusaka, Zambia.\textsuperscript{265} It was attended by various neighbouring southern African countries who became members thereof.\textsuperscript{266} The SADCC was guided by the Memorandum of Understanding on the Institutions of the Southern African Development Co-ordination Conference, signed on 20 July 1981.\textsuperscript{267}

The SADCC’s efforts were primarily focused on ensuring South Africa gained freedom and addressing poverty levels in Southern Africa.\textsuperscript{268} To achieve this, it encouraged cooperation in its ‘regional networks of multilateral projects’, undertaken in key focus areas.\textsuperscript{269} This cooperation was acquired through the states’ common interest in opposing South Africa’s government.\textsuperscript{270} Coordinated action was thus used for projects in the key areas of:

‘[A]griculture and natural resources, mining, energy, industry and trade, manpower, transport, communications and tourism.’\textsuperscript{271}

In relation to trade and industrial expansion, this included developing infrastructure.\textsuperscript{272} Its projects on transport and communication were undertaken with the explicit intention of decreasing members’ dependence on South Africa.\textsuperscript{273} In the area of agriculture, of concern was food security and agricultural research.\textsuperscript{274} These sectors were highlighted as being necessary to develop in order to achieve regional integration.\textsuperscript{275}

Alongside the goal of reduction of dependence on South Africa, the SADCC also aimed to create links between member states to attain regional integration.\textsuperscript{276}

\textsuperscript{266} The countries in attendance included the ‘frontline states’ (Zambia, Angola, Botswana and Mozambique), the ‘Prime Minister designate of Zimbabwe’, Lesotho, Malawi and Swaziland. Ng’ong’ola (note 265 above; 487-488) and ‘History and Treaty’ (note 265 above).

Furthermore, it worked to gather resources for the implementation of its policies at ‘national, interstate and regional’ levels and for financing its development. Finally, it wanted to achieve the ‘cooperation’ and ‘support’ from international sources for its projects. Its success in achieving such aims was very limited though.

### 2.5.3.1 Failures of the SADCC

A number of criticisms were raised against the SADCC, which can be traced to the organisation and its structures. Holland states that its work was hindered by a lack of ‘inter-regional institutions’ to carry it out while arguing that a treaty as its basis would have given it more force. Furthermore, its abilities to attain its aims was reduced by the respect afforded to the sovereignty of states, which it avoided violating. Additionally, the Secretariat did not have powers to coerce members to ensure compliance. Furthermore, while the SADCC allocated the responsibility of the various sectors to the members, this was criticised as certain states were given sectors which they were not suited to oversee implementation in. Holland also highlighted ‘inclusiveness’, lack of enthusiasm and dedication by member states to work as a region and misunderstanding of the distinction between plans for improving cooperation economically and those aimed at ‘integration’ as other factors that reduced the SADCC’s effectiveness.

In relation to its aim of reducing reliance on South Africa, there was limited advancement in transport and communication. By 1987 though, approximately 75 percent of the ‘dry cargo imports and exports’ of the land locked members passed through harbours of SADCC countries. Despite this, there was no evidence of any reduction in reliance on South Africa for ‘both imports and exports’.

288 Holland (note 38 above; 266).
economically, the SADCC was not successful in attaining such independence. Authors, such as Ng'ong'ola and Holland were pessimistic about this aim, describing it as ‘not attainable’ and ‘misplaced’ respectively.

All these obstacles culminated in outcomes of a fall of trade amongst members with inter-member trade only constituting five percent of the total trade of the members. Of this figure, 80 percent was linked to Zimbabwe. Weimer links this to an insufficient amount of tradeable goods being produced and such goods being similar in nature. Furthermore, manufacturing declined between 1980 and 1988 from 13.1 percent to 12 percent when measured as a portion of the members’ gross domestic product (GDP). Income calculated per capita also decreased by 13 percent during this time, exacerbated by the fact that population growth exceeded members’ economic growth. This clearly highlights the SADCC’s failure to achieve its goals.

In other economic matters, the SADCC was not financially able to provide the required financing for its projects. Thus, there was a great dependence upon international donations, which comprised over 90 percent of its funding with only the remainder being sourced locally. This was problematic as it transgressed two of the SADCC’s aims, namely to utilise its own resources and to become more independent. However, the SADCC succeeded in drawing international focus to the region.

300 Leistner (note 276 above; 158).
2.5.4 The AEC

On a regional level, the OAU continued its work towards unifying and integrating Africa.\(^{301}\) This is seen in the Lagos Plan of Action for the Economic Development of Africa\(^{302}\) and adoption of the Treaty Establishing the African Economic Community (Abuja Treaty) in 1991.\(^{303}\) The former would be the starting point for the formation of the African Economic Community (AEC), a body that will oversee economic integration of Africa as a whole.\(^{304}\) This is an overarching goal of the OAU.\(^{305}\) In order to attain this by 2028, the aim was to initially grow existing RTAs while encouraging the formation of new ones.\(^{306}\) This was to be done within the first five years following the implementation of the above agreements.\(^{307}\) During this period, the SADCC changed to the SADC.\(^{308}\)

An important factor that came into play in the 1990s was the realisation that South Africa was close to attaining democracy and consideration of the integration of its economy with the economies of other members was undertaken.\(^{309}\) It began to focus on the liberalisation of the member's economies and political steadiness during such time.\(^{310}\) When South Africa did join the regional body as a democracy, it became the organisation’s largest economy and was responsible for two thirds of the region’s accumulated GDP.\(^{311}\)

2.6 The SADC

2.6.1 Birth and aims

The SADC succeeded the SADCC on 17 August 1992 with the signing of the SADC Treaty by ten states. Its aims include the enablement of cooperation on a broader spectrum of matters of a social, political and economic nature, to be undertaken in areas regarded as key to attaining ‘regional development and integration’. This focus on integrating trade in the region represented a change from the cooperation required for projects under the SADCC. This regional goal of economic integration is to be met using ‘regimental, interventionalist and centrally directed policy’.

Further, the SADC also aims to address pressing social and economic issues in the region whilst working towards ensuring improved opportunities for generating income. It also intends ensuring sustainable financial development through greater collaboration and integration, peace and proper governance as well as attaining regional political integration. Its long-term objectives include formation of a customs union by 2010, a common market by 2015 and a monetary union by 2016 followed by the adoption of a single currency in 2018 as inspired by the EC. The attainment thereof has thus far been hindered.

2.6.2 Failures of the SADC

The SADC, like the SADCC, has experienced numerous failures. It has not met its targets of establishing a customs union, common market or monetary union. In this respect, Leistner has noted that it is simply attempting to ‘run before it can crawl’ while Mapuva and Muyengwa-Mapuva argue that its goals are ‘overambitious’ coupled with

312 The signatories to the Treaty were Angola, Lesotho, Mozambique, Swaziland, Zambia, Botswana, Malawi, Namibia, Tanzania and Zimbabwe. Article 2 and 44 of the SADC Treaty, Leistner (note 276 above; 158), Dugard (note 134 above; 439) and Darku and Appau (note 211 above; 48).

320 Ibid.
321 Ibid.
a ‘dismally poor implementation record’. This can also be attributed to its issues with political leaders and the relationship between the Secretariat and governing elements of the SADC. The Secretariat has no ‘formal political power’, preventing the assurance of compliance with rules. Further obstacles include trade limiting rules of origin, overlapping regional organisation memberships and restraints to supply.

2.7 Association between the GATT and SADC development

The international trading system was initially influenced by developed nations and the protection of their interests. This is evident in the opposition by the USA to the ITO’s development due to its belief that the ITO will intrude into its powers to make trade decisions. The USA’s blocking of the second attempt to form such an organisation is further evidence of its influence. It can be said that this influence was challenged in the following years by developing countries in their attempts to gain access to the multilateral system.

During such time, the GATT members were setting a pace for tariff reduction, evident by the focus on this topic during the first few negotiation rounds. Developing countries were thus faced with this and the influence of developed members when they joined GATT from the 1950s onwards. Coupled with such tariff reductions, the 1970s and 1980s saw an increase in subsidy use, most notably in the agricultural sector. This was concerning for developing countries given its importance to their economies. Furthermore, while the WTO later focused expressly on assisting developing countries in joining the international trading system, this was not the case initially. Greater recognition of their needs and assistance was only seen in 1965

with the incorporation of part IV of the GATT.\textsuperscript{335} This must have been taken as an indication by such countries that they needed to take steps themselves to protect and promote their interests on the international scale.\textsuperscript{336}

The SADCC was formed during the first wave of regionalism, when many newly independent developing countries were becoming GATT signatories.\textsuperscript{337} With such states believing that they had minimal influence in the GATT, came the formation of the UNCTAD in 1964 to help address this.\textsuperscript{338} However, it did not seem to be enough for certain African states to alleviate their GATT related concerns evident by the subsequent formation of the SADCC in 1980.\textsuperscript{339} The conclusion of an RTA presented many opportunities for African countries during such time, especially as a means to ensure effective participation in the GATT.\textsuperscript{340} They were used to encourage political stability and economic advancement, both issues hindering participation, in order to help increase their influence in the multilateral system.\textsuperscript{341} RTAs also allowed for the pooling of resources in order to attain such benefits, which would be of great assistance to countries who had just obtained independence.\textsuperscript{342}

These events surrounding the GATT, and the OAU’s influence in the facilitation of solidarity among African states, can be said to have impacted on the SADCC’s formation.\textsuperscript{343} The GATT’s influence was especially evident in the SADCC’s focus on improving its transportation and communication abilities, which is necessary for attaining development, through the gathering of its own resources.\textsuperscript{344} The failures of the SADCC, seen in relation to manufacturing amongst else, indicated its inability to keep pace with the global system without some changes.\textsuperscript{345}

\textsuperscript{344} Ng’ong’ola (note 265 above; 488) and Weimer (note 265 above; 78-79).
\textsuperscript{345} Holland (note 38 above; 166), Hawkins (note 294 above; 107) and Weimer (note 265 above; 81).
\end{flushright}
The changes that the Uruguay Round brought, especially in establishing the WTO, also influenced shifts in the focus of the Lomé Convention.\textsuperscript{346} It included a greater emphasis on ‘economic integration and functional co-operation’.\textsuperscript{347} This appears to have brought it in line with the GATT’s aim of liberalising trade.\textsuperscript{348} As such, the Cotonou Agreement aimed to continue Lomé, attend to its defects and ensure further development.\textsuperscript{349} Moreover, the establishment of the AEC, which also influenced the change from the SADCC to SADC, can be regarded as being made in an attempt to integrate Africa into the global economy as moulded by the GATT.\textsuperscript{350} Thus, it is evident that the GATT and its advancements over the years influenced not only the SADC’s formation but other organisations and events too, that in turn also played a role in the SADC’s development.\textsuperscript{351}

2.8 Concluding remarks

The advancement of the multilateral trading system did have an effect on the development of regional organisations, such as the SADC.\textsuperscript{352} This was primarily in the form of the many challenges that it presented to developing states upon their entry therein.\textsuperscript{353} To this end, regional trade organisations presented a means to deal with such issues.\textsuperscript{354} As the number of regional groupings increased over the years, so too has implementation of anti-dumping measures.\textsuperscript{355} This is despite the changes to anti-dumping rules with a view to making their requirements stricter over the various

\textsuperscript{346} The Lomé Conventions regulated trade between the European states forming the European Economic Community (EEC) and African, Caribbean and Pacific (ACP) states between 1975 and 1995. Chapter 3:

THE ANTI-DUMPING AGREEMENT AND PARTICULAR SADC INDUSTRIES

3.1 Introduction

This chapter seeks to determine the extent to which the implementation of the ADA has affected particular poultry industries within the SADC, with specific focus on South Africa. To attain this, there will be an analysis of important provisions of the ADA and relevant cases involving SADC member states. In addition, there will be a discussion of how anti-dumping is the exception to the MFN and National Treatment principles. Moreover, the chapter will engage in a brief discussion of the poultry industries within SADC EPA group to determine how such industries have been affected by dumping and the ADA. This will be undertaken with particular focus on the South African poultry sector.

3.2 Exceptions to certain WTO rules for the ADA

In the WTO, there are two key non-discrimination principles that underlie its agreements. This is the MFN principle, found in Article I, and the National Treatment principle, contained in Article III of the GATT. The main aim of both is to ensure that all members share in the benefits derived from the multilateral trading system. To protect this goal from being compromised through unfair competition, anti-dumping duties, being the exception to these principles, can be applied by members in such circumstances.

The MFN principle requires that any benefit accorded to the 'most favoured nation' also be given to all other members. Benefit in this context refers to any 'advantage, favour, privilege or immunity', covering both imports and exports. Additionally, any benefit accorded to a particular product originating from a certain country, including

both WTO members and non-members, must be extended unconditionally and immediately to other members’ like products.\textsuperscript{365} This principle is not applicable to benefits given between states who are party to a RTA established in terms of Article XXIV.\textsuperscript{366} For the SADC, the MFN principle is contained in article 28 of its Trade Protocol.

Conversely, the National Treatment principle is aimed at preventing member states from treating imported products differently to its domestic ones in a negative manner.\textsuperscript{367} This applies once the relevant border duties have been paid, with treatment extended to such products thereafter having to be ‘no less favourable than that accorded to the domestic product’.\textsuperscript{368} There are three elements to this principle.\textsuperscript{369} First, no additional taxes can be applied internally after border duties are paid.\textsuperscript{370} Secondly, imported products must experience no less favourable treatment in relation to rules and requirements than that imposed on domestic products.\textsuperscript{371} Thirdly, no rules can require that the products of local producers be favoured over imported ones.\textsuperscript{372} This principle attempts to secure identical opportunities for competing products of both importing and exporting members.\textsuperscript{373} The SADC gives emphasis to this principle by including it in article 11 of its Trade Protocol.

In application of the ADA, such principles do not have to be followed, thus making it an instrument whose use should be carefully controlled to avoid harming international trade instead of promoting it.\textsuperscript{374} Such non-adherence is permitted as the purpose of anti-dumping action is to ensure that unfair trade is eliminated.\textsuperscript{375} The promotion of fair competition is a fundamental WTO principle and one which can be given effect to and maintained through anti-dumping action.\textsuperscript{376}

\textsuperscript{376} Ibid.
3.3 The ADA, particular provisions and relevant cases

Article VI of the GATT is key, as it extends to all WTO members the right to levy anti-dumping duties against the exports of another.\textsuperscript{377} The ADA expanded on this right by providing a set of rules to guide members in formulating their own anti-dumping ‘policies and practices’.\textsuperscript{378} Moreover, it has been noted that the ADA assists in ensuring that ‘members will not apply anti-dumping measures arbitrarily’, thus curbing use thereof.\textsuperscript{379} In this respect, James has commended it on bringing about a greater degree of ‘transparency and regulation of anti-dumping use’, while also declaring that more needs to be done.\textsuperscript{380}

Various authors have cited issues with the current ADA.\textsuperscript{381} This includes vagueness of its provisions allowing for favourable interpretations by authorities, arbitrary procedures being used for application of the rules and incorrect calculations for determinations of dumping.\textsuperscript{382} This has permitted the instrument to be used by an increasing number of members to counter competition from foreign exporters, resulting in it becoming the most commonly used ‘protection’ in international trade.\textsuperscript{383}

Its widespread use for protection purposes must be considered alongside the rapidly increasing implementation of anti-dumping measures over the years.\textsuperscript{384} In 1958, only 37 anti-dumping measures were in place while in the 1980s approximately 1 600 investigations were launched.\textsuperscript{385} The number of initiations rose to approximately 2 500 between the years 1995 and 2003 with over 1 500 measures being applied.\textsuperscript{386} In December 2013, there were 2 894 anti-dumping measures in place globally.\textsuperscript{387}

in use occurred after the ADA’s implementation, along with growth in global trade and GATT and WTO membership numbers coupled with tariff reductions. Linked to the membership growth has been the significant intensifications in imposition of anti-dumping measures by developing members, whose use has surpassed that of developed ones.

Notably, developing countries were often the target of anti-dumping duties imposed by developed members in the 1980s. This stemmed from their deficiencies in financial and legal resources and knowledge, leading to difficulty in successfully defending disputes. Developed states dominated use during this period, evidenced by the fact that between 1980 and 1989, 95 percent of the anti-dumping measures in place were imposed by them. Thereafter, the main users became the developing members, who were responsible for imposing over half the measures in place between 1995 and 2003. This change has also been associated with tariff decreases, leading to industries turning to other means, such as anti-dumping, to shield themselves against such imports. In Africa particularly, complaints of large amounts of dumped imports entering such states have been noted along with a lack of expertise and resources to deal with this problem. To understand the nature of this issue and other concerns associated with the ADA, a limited examination and discussion of its important provisions will be undertaken.

3.3.1 Article 1

Article 1 of the ADA contains its key principles, such as members being required to ensure that anti-dumping investigations are compliant with the Agreement and Article VI of the GATT. In the case of United States- 1916 Act, the Appellate Body (AB) of

388 Staiger (note 377 above; 741), Prusa (note 47 above; 690 and 698), Jones (note 198 above; 6) and Sudsawasd (note 141 above; 2, 3 and 6).
389 UNDP (note 382 above; 185) and Macrory, Appleton and Plummer (note 92 above; 487).
390 Gupta and Choudhury (note 33 above; 117 and 122).
391 Ibid.
392 Macrory, Appleton and Plummer (note 92 above; 487).
393 Macrory, Appleton and Plummer (note 92 above; 487) and Gupta and Choudhury (note 33 above; 117).
394 UNDP (note 382 above; 185) and Macrory, Appleton and Plummer (note 92 above; 488).
395 UNDP (note 382 above; 192).
396 This thesis cannot undertake an examination and discussion of all the articles of the ADA. Thus, it will be limited to articles 1, 2, 3, 5, 7, 8, 9 and 15 with reference being made to article 4. These articles cover the necessary requirements for an anti-dumping investigation and the treatment to be afforded to developing nations.
397 Macrory, Appleton and Plummer (note 92 above; 500).
the WTO held that the USA’s 1916 Anti-Dumping Act did not conform to such principles because the Act provided for criminal sanctions in certain circumstances, amongst other reasons.\(^{398}\)

### 3.3.2 Article 2

The second article focuses on the determination of dumping.\(^{399}\) It sets out the important principles for such calculations while implementation thereof is left to the member’s discretion.\(^{400}\) The definition of a dumped product is contained in article 2.1, with the key terms being ‘normal value’ and ‘export price’.\(^{401}\)

For the calculation of normal value\(^{402}\), should the amount not be determinable following article 2.1, then recourse to alternatives contained in article 2.2 is required.\(^{403}\) This includes either looking to the price a like product was sold for to a third country or the cost of production plus certain additional costs for ‘selling costs and profit’.\(^{404}\) For the export price, it is usually ascertained by reference to the exporter’s books.\(^{405}\)

If it cannot be located or is regarded as unreliable, then construction thereof using the price charged for sale of the goods to the first independent buyer is permitted.\(^{406}\) In the normal value calculations, usually only sale prices that are greater than its costs will be averaged while all export sales, irrespective of its relation to cost price, will be averaged to determine a final figure.\(^{407}\) Various issues with such elements and calculations have arisen.\(^{408}\)

The recourse to construction of normal value in terms of article 2.2 has been of concern to some exporters due to the discretion it leaves to administering

\(^{400}\) UNCTAD (note 399 above; 6).

\(^{401}\) Trebilcock (note 387 above; 62).

\(^{402}\) Normal value has been defined as ‘normally the price of the like product in the exporting country, as long as the product is destined for consumption there and the price is in the ordinary course of trade’. EA Vermulst The WTO Anti-Dumping Agreement: A Commentary (2008) 19.

\(^{403}\) Trebilcock (note 387 above; 62).

\(^{404}\) Ibid.

\(^{405}\) Article 2.2.1.1 of the ADA and Lal Das et al (note 361 above; 64).

\(^{406}\) Lal Das et al (note 361 above; 64).

\(^{407}\) Trebilcock (note 387 above; 63).

\(^{408}\) Adamantopoulos and De Notaris (note 379 above; 48).
Authors such as Pangratis and Vermulst state that such discretion is excessive. The calculation of ‘reasonable profit’ has however been subject to criticism specifically. Suggestions for improvement thereof have been noted despite article 2.2.2 requiring that this calculation be based on production data and sales made in the ordinary course of the exporter’s business. One such proposal is that the profit amount should be determined by reference to all the exporter’s sales of the product concerned and not merely those sales made in the ordinary course of trade. Thus, to obtain the profit margin, the percentage of such profits in relation to either the ‘total domestic turnover’ or production costs should be calculated instead. Providing such guidelines would not only reduce the extent of dumping margins determined, but also the discretion allotted to authorities herein.

The construction of the export price, allowed in some instances by article 2.3, has also been criticised for being used too often by authorities. It has been recommended that the article be amended to only allow only for its use when an export price cannot be determined based on sales to a third country. This would also reduce the discretion granted to authorities, which is a general concern with the ADA.

Once the export and normal values have been determined, article 2.4 requires that a ‘fair comparison’ between the two be conducted to determine how much greater the normal value is than the export price. The result is the dumping margin. Before this, and to facilitate a proper comparison, article 2.4 sets out further requirements to be met including that the prices used be of the same trading level, either ex-factory,
retail or wholesale, with ex-factory being recommended.\textsuperscript{421} Thus, authorities are required to deduct from the price those costs incurred past the chosen trade level point.\textsuperscript{422} Furthermore, sales considered in this calculation should have been made around the same time.\textsuperscript{423}

The contentious aspect of article 2.4 is the allowances permitted for certain aspects which affect price comparability, particularly when additional costs are incurred between importation and resale of the products for profit.\textsuperscript{424} The article has been regarded as ‘open-ended’ despite the list of such differences contained therein.\textsuperscript{425} This is due to any difference possibly being considered provided its effect on the comparability of prices can be shown.\textsuperscript{426} Although it is not mandatory to give effect to such allowances, as held in \textit{United States- Steel plate}, implementation thereof could decrease the export price thus raising the possibility of a positive dumping finding.\textsuperscript{427} Accordingly, it would seem unlikely that investigating authorities would shy away from exercising this discretion.\textsuperscript{428}

After the above-mentioned adjustments are considered, the comparison between the export and normal prices must be done.\textsuperscript{429} It can be undertaken in three ways.\textsuperscript{430} The first is the weighted average to weighted average method, where the weighted averages for the normal and export prices are calculated and then compared.\textsuperscript{431} Secondly, in the transaction to transaction method, the normal and export prices applicable on the transaction date concerned are compared.\textsuperscript{432} The third method entails a comparison between the weighted average calculated for the normal value and individual export price for each transaction concerned.\textsuperscript{433} Where a calculation

\end{enumerate}
\end{footnotesize}
renders a negative margin, a zero is attributed to it by some states’ investigating authorities, thus increasing the chances of a positive dumping finding and a higher one too.\textsuperscript{434} This practice is known as zeroing and has been the subject of much debate despite a defence being raised that it assists in combatting ‘targeted dumping’.\textsuperscript{435} According to Voon, it has been the most prevalent topic amongst the cases before the WTO.\textsuperscript{436}

Further, use of zeroing was challenged by various states without success before the Uruguay Round.\textsuperscript{437} However, after this Round it was agreed that use thereof be allowed in circumstances contained in article 2.4.2 of the ADA, namely where

‘the authorities find a pattern of export prices which differ significantly among different purchasers, regions or time periods’.\textsuperscript{438}

Interestingly, in order to bypass this requirement, some states began to engage in inter-model zeroing, where the dumping margin was determined for each model within the category of products investigated.\textsuperscript{439} For those models which had a negative dumping margin, a zero was denoted thereto, thus increasing to a greater extent the likelihood of a positive dumping margin being determined.\textsuperscript{440} This practice was ruled by the AB in \textit{EC- Bed Linen} as being improper and thus not allowed under article 2.4.2.\textsuperscript{441} Another variation of this margin calculation did arise.\textsuperscript{442}

The use of zeroing through ‘multiple averaging periods’ was held to be inconsistent with article 2.4.2 in \textit{United States- Stainless steel plate in coils and stainless steel}

\textsuperscript{434} Vermulst (note 402 above; 53-54).
\textsuperscript{435} Vermulst (note 402 above; 53-54) and Macrory, Appleton and Plummer (note 92 above; 507).
\textsuperscript{436} Voon (note 92 above; 442).
\textsuperscript{437} In the case of United States- Fresh and chilled Atlantic salmon from Norway, ADP/87 of 30 November 1992 (United States- Salmon) at para 482 it was held that this method was not ‘inherently biased’. In the case of European Communities- Audio tapes in cassettes from Japan, ADP/136 of 28 April 1995 (EC- Audio tapes) at paras 125-126 and 354, the panel held that this method would not always cause an increase in the dumping margins determined when compared to the transaction to transaction method where each one could result in a less favourable result than the other depending on the circumstances. Vermulst (note 402 above; 54-56).
\textsuperscript{438} Article 2.4.2 of the ADA and Vermulst (note 402 above; 56).
\textsuperscript{439} Vermulst (note 402 above; 57) and Macrory, Appleton and Plummer (note 92 above; 507).
\textsuperscript{440} Vermulst (note 402 above; 57) and Macrory, Appleton and Plummer (note 92 above; 507).
\textsuperscript{441} This finding was confirmed in the case of United States- Softwood lumber II. European Communities- Anti-dumping duties on imports of cotton-type bed linen from India, WT/DS141/AB/R of 1 March 2001 (EC- Bed Linen (AB)) at para 55, United States- Final dumping determination on softwood lumber from Canada, WT/DS264/R of 13 April 2004 (United States- Softwood lumber) at para 98, Vermulst (note 402 above; 58 and 60) and Macrory, Appleton and Plummer (note 92 above; 507).
\textsuperscript{442} Macrory, Appleton and Plummer (note 92 above; 507-508).
This method was used as it was alleged that the normal value had undergone drastic variations during the investigation period, thus necessitating use of an altered method. The USA’s investigating authority had divided the investigation period into two with one being before the economic crisis in Korea and the other one thereafter. Dumping margins were then calculated for each period and zeroes attached to periods which had negative margins. The panel found that:

i. article 2.4.2 did not permit the division of the investigation period as such for the purposes of calculating dumping margins; and

ii. that the export and normal values calculated and compared must relate to identical time periods.

Owing to such difficulties experienced, an amendment to the article to curb such use has been suggested by Satapathy. While these cases assist in ensuring that the ADA is applied correctly, such rulings only require the states concerned to ‘address the specific duties at hand’. There is no obligation for states to alter their rules and methods of practice, thereby not completely preventing other states from also embracing such practices.

**3.3.3 Article 3**

The next step required by the ADA is establishment of whether the dumped products are causing the domestic industry, responsible for production of the like product, to suffer injury. Where data is not available to determine this for the like product

---

443 United States- Anti-dumping measures on stainless steel plate in coils and stainless steel sheet and strip from Korea, WT/DS179/R of 22 December 2000 (United States- Stainless steel plate in coils and stainless steel sheet and strip) at para 7.3, Vermulst (note 402 above; 61) and Macrory, Appleton and Plummer (note 92 above; 507-508).

444 United States- Stainless steel plate in coils and stainless steel sheet and strip (note 443 above; para 7.3), Vermulst (note 402 above; 61) and Macrory, Appleton and Plummer (note 92 above; 507-508).

445 Vermulst (note 402 above; 61).

446 Ibid.

447 United States- Stainless steel plate in coils and stainless steel sheet and strip (note 443 above; para 7.3) and Vermulst (note 402 above; 61).

448 Ibid.

449 Ibid.

450 Ibid.

451 Ibid.

452 Articles 3.1 and 3.7 of the ADA. Footnote 9 of the ADA states that ‘injury’ means ‘material injury to a domestic injury, threat of material injury to a domestic industry or material retardation of the
concerned, then article 3.6 is applicable.\textsuperscript{453} This is known as the ‘product line exception’ as it permits investigating authorities to use available data relating to the ‘narrowest group or range of products which includes the like product’ in such calculation.\textsuperscript{454}

The next important factor in an injury determination is that of the ‘domestic industry’.\textsuperscript{455} The meaning thereof is found in article 4.1 of the ADA\textsuperscript{456}, which has to be followed and given effect to as held in \textit{Argentina- Poultry}.\textsuperscript{457} Furthermore, it was held that more than one manufacturer can be responsible for producing a large part of the like product.\textsuperscript{458} Once such requirements have been established, it can be determined whether the industry has suffered injury.\textsuperscript{459}

More so, investigating authorities need to determine the existence of injury, utilising an ‘objective examination’ of the ‘positive evidence’.\textsuperscript{460} This is usually investigated over a three-year period, wherein injury must be suffered.\textsuperscript{461} The requirement of an ‘objective examination’ has been used as a standard to measure the fairness of findings.\textsuperscript{462} This element must be present in an authority’s findings as noted in

---

\textsuperscript{453} Vermulst (note 402 above; 63), Vermulst (note 402 above; 63-64), and UNCTAD (note 399 above; 19).

\textsuperscript{454} Article 3.6 of the ADA. In the case of \textit{Mexico- HFCS} it was held that article 3.6 does not permit the examination of a category within the like product which would be narrower than the parameters of the like product. UNCTAD (note 399 above; 19), Vermulst (note 402 above; 64-65) and \textit{Mexico- Anti-dumping investigation of high fructose corn syrup (HFCS) from the United States}, WT/DS132/R of 28 January 2000 (\textit{Mexico- HFCS}) at para 7.157.

\textsuperscript{455} Vermulst (note 402 above; 63).

\textsuperscript{456} Article 4.1 states that ‘domestic industry’ refers to ‘the domestic producers as a whole of the like products or those of them whose collective output of the products constitutes a major proportion of the total domestic production of those products’. Vermulst (note 402 above; 67).

\textsuperscript{457} \textit{Argentina- Definitive anti-dumping duties on poultry from Brazil}, WT/DS241/R of 22 April 2003 (\textit{Argentina- Poultry}) at paras 7.331 and 7.338 and Vermulst (note 402 above; 67).

\textsuperscript{458} \textit{Argentina- Poultry} (note 457 above; para 7.341) and Vermulst (note 402 above; 67).

\textsuperscript{459} Vermulst (note 402 above; 63 and 73).

\textsuperscript{460} Article 3.1 of the ADA and Trebilcock (note 387 above; 63).

\textsuperscript{461} The ‘three-year period’ noted here was the recommendation of the WTO Committee on Anti-Dumping Practices (WTO Committee on Anti-Dumping Practices - Recommendation Concerning the Periods of Data Collection for Anti-Dumping Investigations - Adopted by the Committee on 5 May 2000, G/ADP/6 (16 May 2000)). It was ruled in \textit{Guatemala- Cement II} that this recommendation was not binding on members as it was not a rule of the ADA. \textit{Guatemala- Definitive anti-dumping measures on grey Portland cement from Mexico}, WT/DS156/R of 24 October 2000 (\textit{Guatemala- Cement II}) at para 8.266, Vermulst (note 402 above 82-83) and UNCTAD (note 399 above; 21).

\textsuperscript{462} \textit{Thailand- Anti-dumping duties on angles, shapes and sections of iron or non-alloy steel and H-beams from Poland}, WT/DS122/AB/R of 12 March 2001 (\textit{Thailand- H-Beams (AB)}) at para 106 and Vermulst (note 402 above; 74).
In this case the requirement that authorities examine ‘positive evidence’ was determined to mean that it has to be ‘affirmative, objective and of a verifiable character and that it must be credible’. Such requirements have to be met when gathering information and making decisions in respect of articles 3.1(a) and 3.1(b).

Further, Article 3.2 requires authorities to consider various factors in relation to the ‘volume of dumped imports’. The word ‘consider’ was held in both Thailand- H-Beams (AB) and China- X-Rays as not requiring a precise finding that the increase was significant. In Thailand- H-Beams (AB) it was stated that evidence showing that authorities have investigated whether such a significant increase exists, must be noted in the documents. In China- X-Rays, the panel made reference to China- GOES by agreeing with its finding that the authority’s activities relating to this article are to be in accordance with the principles of article 3.1. This includes ‘positive evidence’ being used in an ‘objective examination’.

The relationship between the next important consideration in article 3.1(b) and its corresponding provision in article 3.4 is explained by the panel in Argentina- Poultry.

It held that the close connection between these provisions is such that a violation of article 3.4 also implies a transgression of the other. Article 3.4 requires the

470 The meaning of ‘positive evidence’ and ‘objective examination’ contained in article 3.1 is explained on pages 48 to 49. *China- X-Rays* (note 467 above; para 7.45), *China- GOES* (note 467 above; paras 130-131) and Brink (note 467 above; 320).
471 *Argentina- Poultry* (note 457 above; para 7.325) and Vermulst (note 402 above; 75).
472 *Argentina- Poultry* (note 457 above; para 7.325) and Vermulst (note 402 above; 75).
authorities consider the factors contained therein when determining whether dumped imports are affecting the domestic industry concerned.\textsuperscript{473} The need to examine and consider such factors has been the subject of some panel hearings with the obligation on investigating authorities being settled in \textit{Thailand- H-Beams} (AB).\textsuperscript{474} Herein the AB determined that it is mandatory for every factor listed in article 3.4 to be evaluated and evidence of such assessment to be apparent from the documentation of the investigation.\textsuperscript{475} Before such evaluation, the authorities have to collect information and data for each factor.\textsuperscript{476}

Once authorities have gathered the material required by article 3, article 3.5 requires an investigation be conducted into whether a causal link exists between the dumping and injury.\textsuperscript{477} In doing so, this provision refers to ‘other known factors’ affecting the industry which have to be examined in certain circumstances as stated in \textit{EC-Malleable cast iron tube or pipe fittings}.\textsuperscript{478} Such factors must be considered if they are known, are not the dumped imports and are causing injury at the same time as the dumped imports.\textsuperscript{479} These additional issues must be raised by the parties while the investigation is on-going, at which point authorities are required to examine them.\textsuperscript{480} Authorities are not obligated to search for such factors.\textsuperscript{481} Furthermore, the entire list of factors in article 3.5 does not have to be scrutinised by authorities unlike with article 3.4 as held in \textit{Thailand- H-Beams}.\textsuperscript{482} The individual effect of each one need only be

\textsuperscript{473} Article 3.4 of the ADA and Trebilcock (note 387 above; 64).
\textsuperscript{474} The panels that have considered the obligation on authorities to consider such factors were \textit{Mexico – HFCS} (note 107 above), \textit{Thailand- Anti-Dumping Duties on Angles, Shapes and Sections of Iron or Non-Alloy Steel and H-Beams from Poland}, WT/DS122/R of 28 September 2000 (altered by the report of AB WT/DS122/AB/R), \textit{European Communities – Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India}, WT/DS141/R of 30 October 2000 (EC- Bed Linen) (altered by the AB report WT/DS141/AB/R) and \textit{Guatemala- Cement II} (note 461 above). UNCTAD (note 399 above; 22).

looked at and not the collective effect thereof if found that such factors have not contributed to injury suffered by the industry concerned as a result of the dumped imports.\textsuperscript{483}

In relation to such other known factors, article 3.5 also contains an important principle, known as the ‘non-attribution principle’.\textsuperscript{484} This requires injury caused by such other factors to not be linked to the dumped imports when determining the causal relationship between dumping and injury.\textsuperscript{485} The application and importance of this principle was explained by the AB in \textit{United States- Hot-rolled steel}.\textsuperscript{486} It stated that it applies when injury is not only being caused by the dumped imports but also by other known factors.\textsuperscript{487} In such circumstances, injury caused by each such factor must be determined separately in order to conclude whether the dumped imports are causing the reported injury.\textsuperscript{488}

The AB also ruled that findings relating to the non-attribution principle contained in article 4.2(b) of the WTO’s Safeguards Agreement can assist in interpreting this principle in the ADA.\textsuperscript{489} In this respect, the AB laid down two guidelines which also apply to article 3.5 of the ADA.\textsuperscript{489} First, imports only need to be at least a ‘contributory cause’ to the injury suffered and, secondly, there must be a separation between injury caused by the dumped imports and by the other factors.\textsuperscript{490} While injury determinations

are key to anti-dumping investigations, authorities need to foremost ensure that initiation requirements of article 5 are satisfied.\(^4\)

### 3.3.4 Article 5

Further, an initiation requirement of article 5.3 of the ADA requires investigating authorities to determine the ‘accuracy and adequacy of the evidence’ contained in the application to decide whether an investigation is warranted.\(^5\) An issue highlighted with this article is that it does not specify how authorities must ascertain the ‘accuracy and adequacy’ of the evidence’.\(^6\) This makes it problematic for other states to prove non-compliance therewith and for the WTO to determine whether initiation was warranted.\(^7\)

Some guidance on the nature of evidence required for article 5.3 has been provided.\(^8\) In *Mexico-HFCS* it was stated that the amount and quality thereof needed to start an investigation is not as great as that required to make a final or preliminary decision on injury, dumping or the causal link.\(^9\) Furthermore, the application need not contain evidence for each factor listed in articles 3.2 and 3.4.\(^10\) Evidence can also be submitted in the form of ‘raw numerical data without analysis’ as held in *Thailand-H-Beams*.\(^11\) Over and above the information provided, authorities are permitted to locate relevant evidence and data themselves.\(^12\)

Moreover, article 5.8 states an investigation must be terminated where there is either *de minimis* dumping or negligible injury.\(^13\) *De minimis* dumping refers to the situation where the dumping margin calculated is below two percent, with such calculation being

12. Guatemala-Cement (note 461 above; para 8.62) and Macrory, Appleton and Plummer (note 92 above; 511).

13. This is in addition to the requirement that an investigation must be terminated where the evidence provided showing the alleged dumping and injury is inadequate as stated in article 5.8 of the ADA. Vermulst (note 402 above; 512) and Trebilcock (note 387 above; 64).
required for each producer involved in the investigation.\textsuperscript{502} In \textit{Mexico- Rice} it was noted that while the negligibility calculation is to be done on a ‘country-wide basis’, no such guidance was expressed for the dumping margin determination.\textsuperscript{503} Herein, the Panel ruled that Mexico had violated article 5.8 when it failed to terminate the investigation after finding that two of the producers involved had dumping margins below the \textit{de minimis} level.\textsuperscript{504}

The other circumstance wherein termination must occur is where ‘negligible injury’ is found.\textsuperscript{505} An ‘import share test’ is used to determine this.\textsuperscript{506} Thus, for injury to be regarded as ‘negligible’, an investigated country’s volume of dumped imports must be below three percent of the importing country’s total imports, when expressed as a percentage thereof.\textsuperscript{507} Should individual states investigated not meet this three percent requirement, an investigation can still be initiated where together such states are responsible for seven percent of the total imports.\textsuperscript{508} There have been calls for this option to be abolished as it could potentially increase chances of an affirmative dumping finding.\textsuperscript{509} Authors, such as Vermulst, have also noted that there is no provision in this requirement for developing countries, as with \textit{de minimis} too.\textsuperscript{510} To this end, Satapathy suggests that a five percent limit for negligibility should be applicable.\textsuperscript{511} Other apprehensions in relation to article 5.8 have also arisen.\textsuperscript{512}

There were concerns over the lack of provision of a time period in which the two calculations required by article 5.8 have to be made in.\textsuperscript{513} As such, the Committee on Anti-Dumping Practices attempted to deal with this by making a recommendation in

\textsuperscript{502} This is margin calculated by expressing the normal value as a percentage of the product’s export price. Article 5.8 of the ADA, Vermulst (note 402 above; 119) and UNCTAD (note 399 above; 30).

this respect. It stated that the time limit should pertain to the period used to conduct the investigation or to the ‘most recent 12 consecutive months’ preceding either one of two dates. This is either the initiation date that data is on hand for or the date when the party or parties filed the application for which data is available, as long as there is not a gap of longer than 90 days between the application and initiation of the investigation. This recommendation, as with others, will not be binding as noted in Guatemala- Cement II, thus making concerns relating to the provision still viable. Such concerns include members being able to make ‘arbitrary and unilateral decisions’ when choosing a time period, thereby allowing for a finding that meets the minimum requirements of article 5.8 and for the investigation to continue when it should not have. Satapathy has suggested that the article be altered to include a specific time period to standardise such calculations, thereby limiting the authorities’ discretion. Once all the above requirements are met, then the authority can utilise either definitive antidumping duties pursuant to article 9, provisional duties under article 7 or price undertakings in terms of article 8 of the ADA.

3.3.5 Article 7

Article 7 lays down the circumstances where provisional measures may be utilised. They may only be applied once the conditions in article 7.1 are met. Measures must consist of either a ‘provisional duty’ or security, such as a ‘cash deposit’ or ‘bond’ that is the same value as the provisional determination of anti-dumping duties. Once chosen, they can only be applied for the shortest possible period of time or four months at the maximum unless the requirements of article 7.4 are satisfied, whereupon an

additional two months may be granted. Such deadlines must be strictly observed and cannot be extended beyond such limits as held in *Mexico- HFCS.*

3.3.6 Article 8

Further, price undertakings are also available under the ADA. They can be described as an undertaking or a promise to either ‘revise prices’ or stop exports ‘at dumped prices’ to the extent that this removes any injury being caused. It is only available once positive preliminary injury and dumping findings have been made. If chosen, then no anti-dumping duties can be levied and the investigation will only continue at the request of the exporter.

The importing state, however, has the discretion as to whether or not to accept such undertakings as indicated by the word ‘may’ in article 8.1. They will probably not be accepted where there is a large number of exporters involved, thus making ‘their acceptance impractical’. In instances of non-acceptance, explanations for this should be produced by the authorities. Furthermore, should the exporter decide not to offer or accept an offer to give undertakings, this must not negatively impact upon the authorities’ final decision whether to impose duties or not. Exporters are not obligated to make such undertakings. Thus, the provision of undertakings is essentially based on consensus of the parties concerned. Some disadvantages noted with their use however include possible decreases in sale amounts of the product concerned and having to adhere to the reporting and verification requirements of article 8.6. This remedy has been favoured by exporters as anti-dumping duties are not required if undertakings are implemented and additional profits earned accrue.

to them.\textsuperscript{537} Its use could be expanded by the ruling in \textit{EC- Bed Linen} which classified it as a possible ‘constructive remedy’ for developing countries under article 15 instead of anti-dumping measures.\textsuperscript{538}

### 3.3.7 Article 9

The imposition and gathering of definitive anti-dumping duties is regulated by article 9.\textsuperscript{539} There is no specific guidance in the ADA as to what type such duties must take as noted in \textit{Argentina- Poultry}.\textsuperscript{540} Possible forms include ‘\textit{ad valorem} (percentage)’, ‘specific’ or ‘variable duties’.\textsuperscript{541} States do however have discretion as to whether or not to charge such duties when the requirements are met.\textsuperscript{542} They are encouraged to charge at a rate which is lower than the dumping margin determined if it will eliminate the injury suffered.\textsuperscript{543} In order to decide whether to impose duties, some states have introduced a ‘public interest test’ where the interest of the public is the criterion for this decision.\textsuperscript{544} Should duties be imposed, article 9.2 requires that there be non-discrimination in the collection thereof.\textsuperscript{545} Before such decisions in relation to developing countries are made, article 15 contains certain obligations for developed members.\textsuperscript{546}

\begin{itemize}
\item \textsuperscript{537} UNCTAD (note 399 above; 34), Macrory, Appleton and Plummer (note 92 above; 518) and Vermulst (note 402 above; 170).
\item \textsuperscript{538} \textit{EC- Bed Linen} (note 476 above; para 6.238), UNCTAD (note 399 above; 34) and Macrory, Appleton and Plummer (note 92 above; 525).
\item \textsuperscript{539} Vermulst (note 402 above; 170).
\item \textsuperscript{540} \textit{Argentina- Poultry} (note 457 above; para 7.355) and Vermulst (note 402 above; 170-171).
\item \textsuperscript{541} ‘Specific duties’ could include a ‘fixed amount per unit or per weight’ while ‘variable duties’ refers to the ‘difference between a fixed minimum price... and the actual import price’. Vermulst (note 402 above; 170).
\item \textsuperscript{542} Article 9.1 of the ADA and Vermulst (note 402 above; 171).
\item \textsuperscript{543} This is referred to as the ‘lesser duty rule’. Article 9.1 of the ADA, Vermulst (note 402 above; 171) and UNCTAD (note 399 above; 34).
\item \textsuperscript{544} Vermulst (note 402 above; 171) and UNCTAD (note 399 above; 34).
\item \textsuperscript{545} Article 9.2 of the ADA, Vermulst (note 402 above; 173) and UNCTAD (note 399 above; 34).
\item \textsuperscript{546} Article 15 of the ADA and Vermulst (note 402 above; 215).
\end{itemize}
3.3.8 Article 15

Article 15 is of importance to developing members and was given force by the panel in *EC- Bed Linen* which found that in relation to constructive remedies it imposes

‘an obligation to actively consider, with an open mind, the possibility of such a remedy prior to imposition of an anti-dumping measure that would affect the essential interests of a developing country’.  

Furthermore, it is required of developed states that the ‘exploration’ of possibilities must be actively undertaken by their authorities ‘with a willingness to reach a positive outcome’. The failure to do so in *EC- Bed Linen* constituted a violation of the article. In *United States- Steel Plate* the USA was found not to have violated article 15 when it did not apply a constructive remedy as it had considered its application prior to such decision. Constructive remedies may take the form of a price undertaking or a duty below the dumping margin which is capable of removing the relevant harm.

The application of article 15 has been criticised on the basis that developed nations are not often considering constructive remedy options. Satapathy believes that this is due to the unclear nature of the article and that it has become ‘practically inoperable’. This has led to suggestions that greater detail be incorporated into it while altering its nature to render it mandatory. Other remarks and suggestions have also been put forward in relation to developing states.

---

547 The ‘essential interests of a developing country’ can refer to an industry that is strategic for the state and which is reliant on export trading. *European Communities imposition of anti-dumping duties on imports of cotton yarn from Brazil*, BISD 42 S/17 (adopted October 30, 1995) at para 589, *EC- Bed Linen* (note 476 above; para 233), Vermulst (note 402 above; 216) and Macrory, Appleton and Plummer (note 92 above; 498 and 525).

555 UNDP (note 382 above; 189) and Adamantopoulos and De Notaris (note 379 above; 59).
There have been observations that the initiation of an anti-dumping investigation against a developing state can have great consequences for its affected industry.\textsuperscript{556} This decision alone has been found to impact trading patterns as importers in such circumstances often attempt locating other suppliers of such products.\textsuperscript{557} Subsequent to this, investigations can also be onerous on these states especially when investigating authorities demand a wide range of information.\textsuperscript{558} Adamantopoulos and De Notaris have called for separate requirements for instigation of investigations involving developing states.\textsuperscript{559} This includes an increase in the \textit{de minimis} dumping margins of article 5.8 from two to four percent while cumulation of imports could either only apply between developed or developing states.\textsuperscript{560} Additionally, calls for the provision of ‘technical support’ in the form of additional time and the necessary resources, which could allow such states to work effectively with authorities concerned, have been made.\textsuperscript{561} Should anti-dumping duties be applied to these countries, it has been urged that an obligation be introduced requiring developed nations to review dumping margin and injury calculations a year after imposition to determine if the duties are still needed.\textsuperscript{562}

While the ADA has seen development, there is evidently still room for improvement, especially in the discretion afforded to authorities.\textsuperscript{563} Such discretion is believed to allow anti-dumping measures to be used as a means to protect a state’s industries.\textsuperscript{564} Therefore, it has been suggested that initiation of investigations be rendered more difficult in order to reduce such numbers.\textsuperscript{565} This could be bolstered by permitting compensation in certain instances to help ensure only genuine matters are pursued.\textsuperscript{566} Before such extensive recommendations be effected, the suggestion of Macrory and others that states be required to account for dumping margins calculated, price undertakings accepted and \textit{ad valorem} or percentage duties collected, seems to be a
reasonable one.\textsuperscript{567} While many proposals have been made, an obstacle to their adoption and implementation lies in the eagerness of developed members to review and modify the ADA for the benefit of developing ones.\textsuperscript{568}

\section*{3.4 Approach to dumping by the SADC}

It is important to determine how regional groupings have agreed to approach dumping as it could affect their trade relations with others.\textsuperscript{569} The SADC’s stance is contained in article 18 of its Trade Protocol, requiring member states to adhere to the ADA in this respect.\textsuperscript{570} The definition ascribed to the term ‘dumping’ therein is also aligned with Article VI of the GATT.\textsuperscript{571} These provisions are applicable to all SADC member states who have signed and ratified this Protocol.\textsuperscript{572}

In relation to the SADC EPA group members, Brink in his research in 2005 noted that only South Africa had anti-dumping legislation and the resources to implement it.\textsuperscript{573} Brink suggested that until the SADC decides to implement such legislation for all, each member should have its own.\textsuperscript{574} Legislation of members would need to be harmonised with identical principles being incorporated therein that are ADA compliant, as required by the Trade Protocol.\textsuperscript{575} This could be used as the basis for the development of legislation applicable to the entire SADC later.\textsuperscript{576}

South Africa is responsible for the administration of trade remedies relating to international trade for itself and the Southern African Customs Union (SACU) members.\textsuperscript{577}

Parliament in accordance with section 231(2) of the Constitution of the Republic of South Africa Act 108 of 1996 (the Constitution). Thus, both the GATT and ADA, contained in Annex 1A of the Marrakesh Agreement, are only binding on South Africa internationally as they were not introduced into domestic law through procedures of section 231(4) of the Constitution. These agreements can be used when interpreting the national anti-dumping laws, including the International Trade Administration Act 71 of 2002 (ITA Act), as required by section 233 of the Constitution. The ITAC is responsible for ensuring compliance with such laws and regulations, when carrying out its investigations and in its other responsibilities. The ITAC was established in terms of the ITA Act. This Act operates first with the Anti-Dumping Regulations of 2003, created in accordance with article 59 thereof providing further details on items specified in this article and secondly with chapter 6 of the Customs and Excise Act 91 of 1964.

3.4.1 ADA cases involving SADC member states

South Africa is the only member of the SADC EPA group to have come into contact with the WTO’s Dispute Settlement Mechanism. It has been involved in five anti-dumping disputes, all brought before the WTO by other developing countries, with none advancing beyond the consultation request stage.

In its first dispute with India, India requested consultations in 1999 following the imposition of anti-dumping duties by the Board on Tariffs and Trade (BTT) on certain

580 Ibid.

582 The ITAC was established in terms of section 7(1) of the ITA Act.

583 The Anti-Dumping Regulations form part of the ADA by virtue of the definition of ‘this Act’ contained in section 1 of the ITA Act. The Anti-Dumping Regulations, 2003, Khanderia (note 577 above; 256) and GN 3197 of GG 25684, 14/11/2003.

medication it exported. India’s concerns included non-compliance of South Africa’s definition of ‘normal value’ and their determination thereof with the WTO’s rules and requirements and an incorrect calculation of the dumping margin. It also stated apprehensions over the lack of evaluation of relevant factors indicating the condition of the industry concerned by South Africa. This case did not advance further.

In 2003, Turkey demanded consultations with South Africa relating to anti-dumping measures imposed on its exports of ‘blanketing in roll form’ following an investigation by the BTT. Turkey claimed that notifications given by South Africa were not up to standard and that it had not properly considered the facts in deciding to initiate the investigation, during the investigation as well as thereafter when the duty was applied. In that same year, South Africa imposed anti-dumping measures on Indonesian imports of ‘uncoated woodfree white A4 paper’. While Indonesia initially raised apprehensions over this by requesting consultations, they were withdrawn in 2008 in response to South Africa’s decision to cease application of such measures.

Further, South Africa’s investigation into alleged dumping of frozen whole bird and boneless chicken cuts from Brazil, and the subsequent imposition of provisional anti-dumping measures, led to a request for consultations in 2012. Concerns were raised over the ITAC’s calculations of normal and export values. For the normal value, it was argued that products that were not ‘like’ had been included while for the

export value, sales of products not part of the investigation had been incorporated into the value determined. \textsuperscript{596} Furthermore, it was claimed that the comparison between the weighted averages of each was not fair as the calculation thereof only encompassed one type of both boneless cuts and whole birds. \textsuperscript{597} Brazil noted that in undertaking the comparison required by article 2.4 to determine the margin of dumping, the ITAC did not make any deductions to the normal value or allowances for price comparability purposes. \textsuperscript{598} Concerns over the determination of injury to the domestic industry have also been raised by authors, Khanderia and Brink. \textsuperscript{599}

In determining injury, the ITAC initially divided all the poultry products into either whole birds or boneless cuts. \textsuperscript{600} For the whole birds, Khanderia stated that in calculating price undercutting by dumped imports, the ITAC did not consider the possibility of more than one type of whole bird being sold and for varied prices. \textsuperscript{601} A similar point was raised for the boneless cuts. \textsuperscript{602} Such issues were noted in the consultations request and that deductions to normal values and allowances for items, which influenced the ability to compare prices, were not made. \textsuperscript{603} This was not consistent with the principle found in the panel decision of \textit{China- X-Rays} which, according to both Brink and Khanderia, is concerning. \textsuperscript{604} This principle requires that for a suitable comparison between the product under investigation and the like domestic one, they must be ‘actually comparable’ and note must be taken of any ‘differences between individual products and levels of trade’. \textsuperscript{605}

In addition to the above-mentioned injury issues, Brazil also raised concerns over an apparent lack of consideration of ‘other known factors’ in the ITAC’s determination. \textsuperscript{606} Khanderia noted here that the ITAC only took cognisance of increases in import volumes for both groupings between 2008 and 2010. \textsuperscript{607} It did not determine whether

\textsuperscript{607} Khanderia (note 577 above; 274-275).
such increases could have added to injury suffered by the industry.\textsuperscript{608} Furthermore, it was stated that the relationship between injury suffered and the factor of increased imports was not considered individually for each type of product.\textsuperscript{609} For the other injury indicators in article 3.4, the request included a concern over the large number of positive trends found by the ITAC.\textsuperscript{610} Khanderia has also criticised it in ignoring such findings when determining the industry’s condition, choosing instead to only consider the negative results even ‘if the positive outweighed them’.\textsuperscript{611} This was done for both products under investigation.\textsuperscript{612} In such a situation, the WTO had determined that ‘compelling reasons’ must be provided for any injury determinations made.\textsuperscript{613} In March 2013, the ITAC’s recommendation to impose duties on such imports was rejected by the Minister of Trade and Industry along with the provisional ones imposed being overturned.\textsuperscript{614}

In particular, Pakistan, in 2015 raised similar issues in its consultations request, revealing a number of inconsistencies with the ITAC’s investigation, particularly in its determination of the ‘like product’.\textsuperscript{615} In the request, Pakistan stated that the product in question was ‘Portland Cement’ but noted that the ITAC only considered ‘bagged cement’ in the investigation.\textsuperscript{616} Bulk cement should have also been included within the scope of the like product.\textsuperscript{617} Thereafter, in calculating injury to the domestic industry, the ITAC only considered sales figures from KwaZulu-Natal and not for the cement industry in the SACU as a whole, which was required.\textsuperscript{618} Pakistan also noted that the

\textsuperscript{618} Khanderia (note 577 above; 268).
investigation into whether dumping was causing the injury complained of, was not
carried out objectively. It stated that the evaluation of factors contained in article 3.4
was done by simply indicating whether the facts showed an increase or decrease for
each. In this regard, Khanderia stated that no ‘clear and persuasive explanation’
was given for concluding that the dumped products had caused the injury. Pakistan
also noted that in the comparison between normal and export values no adjustments
for various items such as selling, general and administrative costs were made.

In consideration of those investigations conducted by the ITAC, it appears that its
approach thereto is flawed. This is apparent in its incorrect determination of the ‘like
product’ by either not including all the relevant products or including those which are
not comparable. Concerns in both investigations were raised over the fairness of
the comparisons to determine the margin of dumping and in injury determinations,
where factors affecting price comparability were not considered. Of particular
concern is the lack of thorough examination and explanation of the causal relationship
between the injury experienced and the factors of article 3.4 as well as other known
factors. This is problematic as it could lead to distrust of the ITAC’s future
investigations, thus putting strain on South Africa’s trade relations. Additionally,
exporters might choose to shy away from supplying the South African market with
products, thus reducing the opportunity for its people to experience the benefits of

cheaper goods and improved living standards. Other states could also view South Africa as embracing protectionism through such anti-dumping activities.

### 3.5 Approach of the EU to dumping

In the EU, anti-dumping action is regulated by article 207 of the Treaty on the Functioning of the European Union along with the EU Anti-Dumping Regulations. The Trade Directorate of the European Commission is responsible for investigating dumping claims.

Some notable features of the EU’s legislation include fulfilment of a third requirement, in addition to that of dumping and injury, for the imposition of anti-dumping measures. It must be proven that imposition of the measures, in exercise of the members’ discretion under Article 9.1 of the EU Anti-Dumping Regulations, would be in the Union’s interest. Article 21.1 furthermore requires the ‘interests of the domestic industry and users and consumers’ be considered as well as the necessity to remove the negative effects on trade and reinstate competition, both altered by the dumping. Moreover, for the Commission to entertain a claim, the imports of the country concerned must represent not less than one percent of the EU’s ‘market share’. However, should a number of countries under investigation together be responsible for imports representing a minimum of three percent of the Union’s consumption, an investigation can then be initiated. In both circumstances, the volume of imports will not be regarded as negligible. This has raised concerns and could indicate the use of anti-dumping as a form of protection.

633 Voon (note 92 above; 443) and articles 21, 7.1(d) and 9.4 of the EU Anti-Dumping Regulations.
634 Article 21.1 of the EU Anti-Dumping Regulations.
635 Article 5.7 of the EU Anti-Dumping Regulations and Brink (note 551 above; 12-13).
636 Article 5.7 of the EU Anti-Dumping Regulations and Macrory, Appleton and Plummer (note 382 above; 71).
637 Article 3.4, 5.7 and 9.3 of the EU Anti-Dumping Regulations and Macrory, Appleton and Plummer (note 382 above; 71).
638 Macrory, Appleton and Plummer (note 382 above; 71).
The EU threshold for cumulation of three percent is less than the seven percent contained in article 5.8 of the ADA.\(^{639}\) Macrory states that in doing so the EU has permitted injury to be proven with less difficulty, thereby allowing for consideration of a greater number of dumping complaints.\(^{640}\) Additionally, Eggert has noted that the EU has thus given producers a greater chance in seeking and attaining the imposition of duties by making it easier to approach the Commission.\(^{641}\) Furthermore, it was found that a majority of anti-dumping proceedings between 1995 and 2012 had been initiated for products where the EU lacks a ‘comparative advantage or is losing it’.\(^{642}\) While James has submitted that this is all relative to the amount of EU products being investigated for anti-dumping, it could be deduced that measures are being used to protect local industries against imports.\(^{643}\)

### 3.6 Effect of the ADA on the SADC members’ poultry sectors

Agriculture is an important industry for many African countries, including those in the SADC region.\(^{644}\) For countries such as South Africa, poultry is a major contributor thereto with other sectors, such as soya bean, in turn being dependent on poultry.\(^{645}\) Of interest, poultry imports from Brazil, the USA and European states have been noted as an issue for African countries.\(^{646}\) The effect of ADA on this sector will be briefly evaluated in relation to each of the SADC EPA group members, with particular focus on imports of frozen bone-in portions.\(^{647}\)

\(^{643}\) James (note 57 above; 14 and 17).

\(^{645}\) Boshoff (note 11 above; 3) and Dunn (note 9 above; 56).

\(^{647}\) South Africa will be discussed separately from other members of the SADC EPA grouping in relation to its poultry industry. Frozen bone-in portions include ‘whole chicken- cut in half, leg quarters, wings, breasts, thighs, drumsticks and other portions’. While such chicken products will be the main focus, reference will also be made to imports of other poultry products which are of particular concern to specific countries in order to indicate the problems that they are facing and the effect of the ADA on them. ‘South African Poultry Meat Imports: Tariff Code Report for March 2017’ available at [http://www.sapoultry.co.za/pdf-statistics/poultry-imports-report.pdf](http://www.sapoultry.co.za/pdf-statistics/poultry-imports-report.pdf), accessed on 24 May 2017 and K Crowley ‘Imports put SA’s chicken sector in distress, but Europe disagrees’ 25 January 2017, available
In Botswana, only imports of poultry products which cannot be produced in the country, including ‘Further Processed Chicken products (FPCs)’ from South Africa and Zimbabwe, are allowed while the importation of broiler chicks has been ‘blocked’. Otherwise, the total annual demand of approximately 60 000 tonnes is met by the local industry. The ability to meet their own needs stems primarily from various import restrictions which have been in place for approximately 40 years. Consequently, imports are not a pressing concern for Botswana and so its interactions with and the effect of the ADA on the sector could be described as minimal.

In Namibia, concerns arose over large imports of poultry products of the same nature as those produced locally and at lower prices. This was apparently resulting in losses for the local industry which could not compete with such prices. It has also been reported that ‘low cost and allegedly low-quality poultry’ was being imported from Brazil but only in small quantities for certain users, such as hospitals.

Such occurrences led to the Namibian Trade and Industry Ministry introducing the requirement of importation permits in 2013. Only those products not produced locally up the quantity of 600 tonnes could be imported with no other products originating from ‘slaughtered chickens’ being allowed. Currently there is a monthly

646 Ibid 18.

648 Shipanga (note 652 above).

649 Ibid.

650 ‘Namibia Introduces Poultry Meat Import Quota’ (note 652 above).

651 Ibid.
restriction of 1,500 tonnes on poultry imports. The majority of the local poultry demand of approximately 3,000 tonnes per month is being satisfied by imported products. It is apparent that the opening of the borders to imports from abroad has somewhat injured the local industry, although there seems to be no evidence of anti-dumping action being taken by Namibian authorities in this respect. The impact of the ADA on this industry therefore cannot be conclusively deduced.

Lesotho’s poultry production is not of a significant amount, in relation to both its own numbers and that of other SADC states. Such production accounts for 5.4 percent of the total production of the country’s ‘livestock industry’. Furthermore, it is unable to meet its own poultry demands due to its ‘under-developed’ industry, which is mainly of a subsistence nature. Thus the remainder of its need is satisfied by South African imports. As Lesotho cannot meet its poultry demands without importations, its concerns over dumping could be said to be minimal and thus the ADA impact is probably immaterial.

In contrast, Swaziland’s poultry sector has been classified as one of the ‘top producers’ in Africa. Its focus has been on broiler chicken production in order to reduce dependence on South African imports. Whilst a levy is charged on poultry imports except those of the EU, of between 12 and 82 percent depending on the type of poultry, it has been reported that Swaziland does not permit such imports. However,

---

658 Ibid.
659 ‘Namibia Introduces Poultry Meat Import Quota’ (note 652 above).
661 Ibid.
663 Ibid.
664 Ibid.
anxieties over cheap imports have increased since South Africa concluded an agreement with the USA under the AGOA, allowing imports of US poultry products up to 65 000 tonnes per year into its market.668 Concerns are not that such product will be exported to Swaziland as the USA agreed with South Africa not to do so, but rather that the product will be brought into Swaziland through the South African food retailers, which have stores in Swaziland.669 It is believed that this will impact negatively on local producers, especially smaller ones, and the industry as a whole.670 While Swaziland does not seem to have been affected by the ADA, it is evident that it could be required to make use of it in the future should such cheaper imports materialise.671

The Mozambican poultry industry is also facing similar challenges.672 This includes a growing demand that cannot be met by local production, high production costs and alleged dumping by various states.673 There have also been allegations of dumping of frozen chicken by South Africa, Malawi and Brazil, which would compete with its local broiler production that supplies the majority of poultry meat sold.674

In 2011, after allegations made by the local industry that dumping was occurring, poultry imports were put on hold to give it an opportunity to supply the local demand itself.675 Following their inability to do so, imports were again allowed.676 Since then,
calls made to reduce dependence have been met with a promise to ban poultry imports from 2019, coupled with support being extended to producers thereafter.\textsuperscript{677} While Mozambique has experienced dumping in recent years, it appears as though the ADA has had limited effect on it.\textsuperscript{678} It is also evident in the apparent lack of investigation preceding the imposition of anti-dumping duties.\textsuperscript{679} It seems that the ADA has had limited influence on the poultry industries of not only Mozambique but also the other states discussed.

3.7 Effect of the ADA on the South African poultry sector

The poultry sector is important for the South African economy.\textsuperscript{680} In 2016 it made the greatest contribution to the agricultural sector’s total gross production, namely 18 percent thereof.\textsuperscript{681} The industry is however not able to satisfy the local demand and consumption is increasing to the point that an additional 700 000 tonnes will be required by 2024.\textsuperscript{682} Amongst South African consumers there is a demand for ‘bone-in portions’ whereas in Europe breast meat is in high demand.\textsuperscript{683} Such demand in Europe allows for producers to charge higher prices for breast meat while other portions can be sold cheaper elsewhere, such as in South Africa.\textsuperscript{684} Thus, the EU’s products can be imported at a rate which is less than the cost of production in South Africa despite South Africa’s production costs being an estimated 25 percent less than the EU’s costs.\textsuperscript{685}

Since 2010 it has been reported that poultry imports into South Africa from various countries are close to doubling.\textsuperscript{686} In March 2017, the USA became the primary exporting country for poultry to South Africa with its imports constituting 38.2 percent

while those of the EU were 14.3 percent although this was largely due to avian influenza bans affecting some European states.\textsuperscript{687} According to a report by the South African Poultry Association (SAPA) for March 2017, frozen bone-in portion imports increased by 131 percent or 21,304 tonnes in comparison with February 2017.\textsuperscript{688} The total imports of such products for 2016 amounted to 239,589 tonnes, equating to a 24.5 percent increase from the 192,390 tonnes imported in 2015.\textsuperscript{689} In 2015, imports satisfied approximately 20 percent of the local demand.\textsuperscript{690}

Currently, South Africa applies varied duties to the range of poultry imported, barring a few exceptions.\textsuperscript{691} Exceptions include the USA, which is allowed to export up to 65,000 tonnes of poultry products without duties being imposed, and the EU, which enjoys duty free imports due to the Trade, Development and Cooperation Agreement (TDCA) with South Africa.\textsuperscript{692} A further exception is the UK, Netherlands and Germany where measures varying between 3.86 and 73.33 percent apply to frozen bone-in chicken portions following an ITAC investigation in 2013.\textsuperscript{693}

As such, the poultry industry has recently been making calls for the imposition of increased tariffs on imported poultry.\textsuperscript{694} The ADA and its various requirements have placed South Africa in a position where the application of tariffs following an investigation, either done correctly or shy of the ADA standards, could result in its trading partners imposing countervailing duties or other remedies.\textsuperscript{695} Furthermore, duties can only be implemented for a limited period of five years and so action is

\textsuperscript{695} G Uys ‘Higher tariffs and trade bans will not save local poultry industry’ Farmer’s Weekly 7 July 2017 at 20.
required to ensure that the industry can cope when imports resume thereafter.\(^{696}\) This is problematic considering the industry’s position in the economy.\(^{697}\)

Aside from its contribution to the country’s coffers, poultry also assists in providing jobs for skilled and unskilled workers and can do so in ‘semi-rural and peri-urban areas’.\(^{698}\) This makes protection of the industry important given South Africa’s high unemployment rate.\(^{699}\) The extent of such problem is that 48 000 people are employed directly by the poultry industry, while it indirectly supports or is responsible for another 63 000 jobs.\(^{700}\) Conversely, chicken serves as one of the primary animal protein sources for many families with the cheaper imports allowing a greater number of people to have access thereto.\(^{701}\) While this is an important consideration for South African authorities, any dependence upon such food imports could jeopardise the country’s food security as price changes and supply will be at the discretion of exporters.\(^{702}\) Thus, the ADA has placed South Africa in a situation where many factors have to be considered when deciding what action to take while the industry could suffer further damage as the situation progresses.\(^{703}\)

3.8 Concluding remarks

The ADA appears to have had limited effect on the SADC EPA members in relation to their poultry industries as they choose to impose measures to protect such industries with seemingly little regard for the ADA’s requirements.\(^{704}\) For South Africa however, the ADA has affected it through the binding rules of the ITA Act.\(^{705}\) Its efforts to give effect to such laws, through ITAC’s investigations, have raised many concerns though.\(^{706}\) This could lead to states imposing counteracting measures should the ITAC

apply anti-dumping measures on poultry imports after conducting questionable investigations now and in the future. Furthermore, due to the ADA, authorities have to consider a wide range of factors when making such decisions, which have the potential to affect numerous individuals and the economy, whilst ensuring that South Africa adheres to its WTO commitments. The ADA has thus affected the industry in that authorities cannot simply provide it with the protection demanded. The next chapter will provide more insight into anti-dumping practices and how it is affecting the SADC-EU relationship.

Chapter 4:

ANTI-DUMPING PRACTICES WITHIN THE SADC-EU RELATIONSHIP

4.1 Introduction

The focus of this chapter is on determining the extent to which anti-dumping practices have affected the SADC-EU relationship, with particular focus on current EPA negotiations. This question will be answered by first establishing and analysing the main principles and elements of both the SADC and EU. This will be followed by a brief report of the SADC-EU EPA negotiations and the particular issues faced by the SADC during such period. The principles of each organisation discussed prior will then be linked to the EPA in terms of whether they can be attained through it. Further, recent anti-dumping investigations undertaken by each organisation against the other will be included in the discussion to determine how such actions have affected this relationship.

4.2 Main principles, values and aims of each Organisation

4.2.1 The SADC

The SADC is a mixture of countries at different levels of development, grouped together merely by their geographical location and historical linkages. This in itself presents a complexity within its unique structure. Considering this, the principles that the SADC members must abide by are contained in article 4 of the SADC Treaty. Members’ actions are to be guided by ‘sovereign equality of all’ member states; unity, ‘peace and security’; democracy, human rights and rule of law; benefit for all and equilibrium and the peaceful settlement of disputes. Such principles find application in members’ efforts to attain the objectives contained in article 5.1 of the SADC Treaty. Important aims include the reduction of poverty; improvement of the standard of living; sustainable economic development achieved through reliance on fellow members and the productive use of available human and natural resources.

710 Hansohm and Breytenbach et al (note 276 above; 182) and ‘History and Treaty’ (note 265 above).
711 Mapuva and Muyengwa-Mapuva (note 39 above; 25).
712 Article 4 of the SADC Treaty.
713 Article 5.1 of the SADC Treaty.
714 The Regional Indicative Strategic Development Plan (RISDP) is a key SADC plan that was accepted by the SADC Summit in August 2003. It primarily aims to increase integration and reduce
The methods used to attain such aims are found in article 5.2 with areas of key importance in which to focus such efforts being agriculture, food security and the advancement of human resources.\(^{715}\)

The approach of the SADC to trade in the region is encapsulated in its Trade Protocol with primary focus being on liberalising trade.\(^{716}\) Furthermore, it also refers to economic and industrial growth along with ‘good governance’ as being key goals.\(^{717}\) The structures tasked with ensuring such objectives are achieved are found in article 31 of the Protocol.\(^{718}\) This includes the Committee of Ministers responsible for overseeing execution of the Protocol, the Committee of Senior Officials which monitors its implementation and the Sector Coordinating Unit responsible for the daily execution thereof.\(^{719}\)

4.2.2 The EU

The EU’s historical development is well known and the link between its members is based on history, geography as well as the attainment of political and economic power.\(^{720}\) The EU is also guided in its actions by certain values, namely respect for human rights and the dignity of humans, democracy, the rule of law, freedom and equality for all.\(^{721}\) The advancement of human rights is not limited to those living in EU member states but the EU also attempts to attain this ideal in other states too.\(^{722}\) These

\(^{718}\) Article 31 of the SADC Trade Protocol and Ndlovu (note 214 above; 188).

\(^{719}\) Articles 31(2)(a), 31(3)(e) and 31(5)(a) respectively of the SADC Trade Protocol.

\(^{722}\) In the 2012 Strategic Framework on Human Rights and Democracy, aimed at standardising rights and ensuring greater effectiveness, the Action Plan on Human Rights and Democracy was annexed thereto. This Plan, applicable from 2015 to 2020, states that the EU will object to discrimination and protect political, economic, civil, cultural and social rights in countries outside the EU. Furthermore, it incorporates and will continue to include human rights clauses in its trading and cooperation
values are all contained in the Charter of Fundamental Rights, which must be upheld by all EU establishments and member governments.⁷²³

In relation to the objectives it strives towards, a key one is to give effect to its values and ensure peace and improved prosperity for all in the region.⁷²⁴ Furthermore, it aims for trade within its borders to be free-flowing whilst development is ‘stable and sustainable’.⁷²⁵ It believes the latter is attainable when there is both growth in the economy and steady prices.⁷²⁶ Conversely, its international aims include maintenance of peace, eradication of poverty and the promotion of human rights and trade that is ‘fair’ in nature.⁷²⁷ Such global aims seem to be affected by the position it adopts in relation to its internal market.⁷²⁸

The EU has been classified as the biggest trade group, being responsible for approximately 20 percent of international trade.⁷²⁹ While this represents the largest market for developing countries’ exports, access thereto can be hampered in certain circumstances by the protection the EU affords to its market.⁷³⁰ Of course, this is done in an attempt to grow its internal market to the greatest extent.⁷³¹ Such growth is only attained through its trade with other states, especially ones whose markets have not been penetrated as noted by Hurt and Franicevic.⁷³² For such markets, liberalisation is encouraged by the EU, thereby ensuring favourable access for its products.⁷³³

4.3 SADC-EU EPA negotiations

4.3.1 Background to the EPAs: Lomé Conventions and the Cotonou Partnership Agreement

Historically, the relationship between Europe and the African, Caribbean and Pacific countries (known as the ACP group) dates back to colonial ties. The creation of the then European Economic Community (EEC) presented a conundrum to those countries who wanted to maintain their links with their colonies. As such, a number of agreements were implemented to give effect to this ‘special relationship’. The trading relationship, in the form of economic cooperation, between the European states and certain states in ACP areas, was regulated initially by the Yaoundé Convention and thereafter by the Lomé Conventions. The latter Conventions administered such trade from 1975 to 1999, with five being negotiated and signed therein. The main feature of these agreements was the extension of non-reciprocal

737 The Yaoundé Convention was signed on 20 July 1963 by six European states (France, Belgium, Italy, Germany, the Netherlands and Luxembourg) and 18, later 19, African countries (‘Benin, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Congo (Brazzaville), Congo (Kinshasa), Côte d’Ivoire, Gabon, Madagascar, Mali, Mauritania, Niger, Rwanda, Senegal, Somalia and Togo’) as well as Madagascar and Mauritius. The five-year Convention came into effect on 1 June 1964 and its application ceased on 31 May 1969. The European states undertook to eliminate customs duties over time on certain imports from the African countries while maintaining a common external tariff against equivalent imports from other states. Aid for development to the value of $800 million was also granted to the countries concerned from 1964 to 1969. The African states were required to steadily reduce customs duties on certain imports from the European states concerned while increasingly purchasing a greater portion of goods required from such states too. Yaoundé Convention II was signed in 1969 and applied from then until 1975 with the most significant change being the decision by the European states to no longer apply the common external tariff against imports from states not party to the Convention. ‘Partnership in Africa: the Yaoundé Association’ (note 735 above; 5-6), A Keck and R Pierrmartini ‘The Economic Impact of EPAs in SADC Countries’ available at https://www.wto.org/english/res_e/reser_e/ersd200504_e.doc, accessed on 5 March 2017 at 3, Sissoko, Osuji and Cheng (note 736 above; 8), ‘European Parliament Fact Sheets, 6.4.5. Relations with the African, Caribbean and Pacific countries: from the Yaoundé, Lomé Conventions to the Cotonou Agreement’ available at http://www.europarl.europa.eu/facts_2004/6_4_5_en.htm, accessed on 29 August 2017 and ‘Evolution of cooperation’ available at http://ec.europa.eu/development/body/cotonou/maps_en.htm, accessed on 30 August 2017.
738 Lomé I was signed in on 28 February 1975. Its main feature was the granting of non-reciprocal trading advantages by nine states of the EEC to 46 ACP countries. Furthermore, the Stabilization of Exports (STABEX) was introduced under Lomé I and the System of Minerals (SYSMIN) was given effect to under Lomé II. Both were insurance arrangements aimed at reducing losses suffered in
trading preferences by the European countries for certain products imported from the ACP states. Interestingly, customs duties and quantity limitations were not applied for particular ‘manufactured and agricultural products’ that, according to Fontagné and others, posed no competition to those products supported by the Common Agricultural Policy (CAP) in Europe. In exchange, the ACP states were only required to ensure application of the MFN principle, especially in relation to imports from the various European states.

The ACP states made various requests over the years for improvement of the agreements. This included duty-free preferences being granted for ACP products where production of the corresponding product in Europe was assisted under the CAP, streamlining of the rules of origin and for a greater amount of aid. The Lomé Conventions ended after 1999 for various other reasons though.

740 The CAP is a programme that assists farmers in many respects, mostly financially, to ensure that agricultural development is achieved. ‘CAP at a glance’ available at https://ec.europa.eu/agriculture/cap-overview_en, accessed on 5 August 2017 and Fontagné, Laborde and Mitaritonna (note 738 above; 186).

741 Ibid.

742 Keck and Piermartini (note 737 above; 3).
towards the end of the 1990s the EU was not content with the results of the Conventions, namely the unsatisfactory attainment levels of ‘good governance, human rights and democratisation’ amongst the ACP states. Moreover, there was dissatisfaction with the states’ use of the funds allocated for development purposes from the European Development Funds. It was also noted that exports of the ACP states had neither grown, become more competitive nor varied in nature despite the preferences granted over the years. Borrmann and others have argued that such states were prevented from taking full advantage of such preferences by impairments in capacity, transportation and marketing means as well as an inability to comply with sanitary rules.

The most notable motive however for ending the Lomé was the refusal by other developing WTO members to grant a waiver from the WTO rules for such Conventions beyond 2007. The EU had to seek a waiver of the requirements of Article XXIV of the GATT as the Conventions established neither a free trade area nor customs union which was both reciprocal and applicable to a considerable amount of trade between the parties. This led to the EU discriminating between the ACP states and other developing WTO members, in violation of the non-discrimination rules particularly the

750 Article XXIV(5) of the GATT, Grynberg (note 349 above; 17), Fontagné, Laborde and Mitaritonna (note 738 above; 180) and ‘The Economic Impact of the SADC EPA Group – EU Economic Partnership Agreement’ European Commission (note 749 above; 10).
MFN. The EU rectified this in the subsequent Cotonou Agreement of 2000 which replaced Lomé. The Cotonou Partnership Agreement was entered into by the EU and 79 ACP developing group members on 23 June 2000, applicable over 20 years. The states therein agreed to work towards the formation of free trade areas that would be attained through EPAs. Reciprocity between the EU and ACP states would be foundational to these EPAs to render them compliant with Article XXIV of the GATT, thereby also

751 The MFN principle is contained in Article I of the GATT. The decision to move away from the Lomé Convention was also influenced by the decision of three panels and the Appellate Body of the WTO relating to the EU’s banana import arrangements. The world’s largest banana producers were the Caribbean, Philippines and Central American states with Europe being the biggest market for such product. In July of 1993, European states introduced a ‘system of tariff quotas’ to ensure that it complied with protocol 5 of Lomé IV and the Banana Protocol in terms of this Convention. In respect of this system, free access was granted to bananas imported from those 12 ACP states that typically supplied this product while a quota was applied to bananas imported from Central American states and the non-traditional ACP countries. Moreover, those suppliers subject to the quota were further required to apply for an import licence. In the second panel report of February 1994, where the complainants were Ecuador, the USA, Honduras, Mexico and Guatemala, it was determined that the European states were discriminating between the various developing states. Additionally, such actions did not comply with articles I and III of the GATT. In the third panel report, it was decided that there was non-compliance with Article XIII of the GATT but that the quota could still be applied by virtue of the waiver granted for the Lomé Convention. Article XIII concerned ‘non-discriminatory administration of quantitative restrictions’. The AB held however that the ‘allocation of tariff quota shares’ contravened Article XIII and that the waiver did not alter this position’. It also found that the allocation of licences and rules relating to such licences contravened articles I and III of the GATT. The US was ordered to alter such rules, which formed part of the Lomé Convention, to render it compliant with the GATT. On the 8th of November 2012, the EU notified the WTO that it had reached a ‘mutually agreed solution’ with the complainants. Grynberg (note 349 above; 6-8 and 23), "EC- Bananas III" available at https://www.wto.org/english/tratop_e/dispu_e/cases_e/1pagesum_e/ds27sum_e.pdf, accessed on 30 August 2017, European Communities - Regime for the Importation, Sale and Distribution of Bananas - Request for consultations by Ecuador, Guatemala, Honduras, Mexico and the United States – Addendum of 8 November 2012, European Communities – Regime for the Importation, Sale and Distribution of Bananas, WT/DS27/R/ECU (Ecuador) / WT/DS27/R/GTM, WT/DS27/R/HND (Guatemala and Honduras) / WT/DS27/R/MEX (Mexico) / WT/DS27/R/USA (US), adopted 25 September 1997, as modified by Appellate Body Report WT/DS27/AB/R, DSR 1997:II, p. 695 to DSR 1997:III, ‘The Banana Wars Explained’ available at https://www.theguardian.com/world/1999/mar/05/eu.wto3, accessed on 30 August 2017, A Landau ‘The Cotonou Agreement: An EU Replica’ available at https://ecpr.eu/Filestore/PaperProposal/ee66a31d-5397-4bc9-a7d0-852cfa7d5cd.pdf, accessed on 5 August 2017 at 8, Fontagné, Laborde and Mitaritonna (note 738 above; 180), ‘The Economic Impact of the SADC EPA Group- EU Economic Partnership Agreement’ Tralac (note 747 above) and Borrmann, Busse and De La Rocha (note 738 above; 233-234).

754 Ukpe (note 40 above; 213) and Bertelsmann-Scott (note 746 above; 13).
addressing the concerns of the WTO members. This was to be completed before expiration of the waiver in 2007. In terms of the Agreement, the EU granted non-reciprocal duty-free access or a reduced duty rate for various products exported by the ACP states to the EU. The aims of the EU in doing so was to assist in poverty reduction amongst the ACP populations, encourage maintainable growth therein and integrate these states into the global economy. It can be said that comparable objectives guided the EPA negotiations that followed.

Similar to Lomé and as contained in the Cotonou Agreement, the fundamentals of ‘human rights, democratic principles, the rule of law and good governance’ are what the EU based its objectives on, especially in relation to the attainment of development. The EU undertook to ground the EPAs in four ‘pillars’. This included both parties being subject to rights and duties, the EPAs being compatible with the work of applicable regional organisations, encouragement of development while being cognisant of the states’ limitations and compliance with the WTO rules so to attain incorporation of these states into the world economy.

Upon such bases, the EPAs are to be formulated to encourage increases in regional integration and sustainable growth while assisting in the attainment of other goals. Such goals include growth in trade, in relation to volume and levels thereof, thereupon a reduction in poverty levels amongst group members along with the raising of the countries’ income and employment. Such an association has also been supported

by authors such as Mapuva and Muyengwa-Mapuva. Furthermore, this is all to be attained with respect being extended towards the key development goals of each country. The ultimate goal for the EU is to assist in enabling the ACP states to integrate into and participate in the global economy. This has been incorporated into the EU’s work to assist the WTO and itself in attaining this ideal found in the preamble to the Marrakesh Agreement.

4.3.2 The start of the EPA negotiations

The EPA negotiations were met with a mixture of optimism and critique. Much of this was due to the ACP states generally not having decreased their dependence on the EU nor having advanced themselves over the years despite the longstanding relationship and development opportunities granted. The negotiation and formation of the EPAs was to be undertaken by initially separating the ACP states into negotiation groups. Seven were formed. Such divisions were undertaken by the ACP states themselves, who were encouraged to do so in accordance with their regional organisation memberships. Thereafter, the negotiations were divided into two main phases. The first phase, from February 2002 to October 2003, involved

---

765 The authors write that for Africa, regional integration has been viewed ‘as a means of encouraging trade’ and that ‘regional integration has become increasingly accepted as essential in facilitating economic and political development’. Furthermore, the authors also stated that it ‘has been credited with providing an important step towards a wide global involvement’ alongside its ‘potential to promote economic growth and reduce poverty through increased exports of domestic goods’. Mapuva and Muyengwa-Mapuva (note 39 above; 23).

766 ‘The Economic Impact of the SADC EPA Group – EU Economic Partnership Agreement’ European Commission (note 749 above; 12-13) and McQueen (note 764 above; 1371).

767 Bertelsmann-Scott (note 746 above; 26).

two varied tariff arrangements, namely the EPA and TDCA, should South Africa not be party to the EPA and to avoid fragmentation of the SADC, as alleged by Hurt.\textsuperscript{764} In lieu of the existing problems with overlapping regional body memberships and varied development statuses of the states, this concern was valid.\textsuperscript{765}

### 4.3.3 Issues that arose during the SADC EPA negotiations

#### 4.3.3.1 Existing memberships

A major problem that came about through the EPA negotiation is the non-alignment of such groupings with the various states’ existing regional memberships, particularly in Africa.\textsuperscript{766} It further compounds prevailing issues within such bodies, namely overlapping memberships with different regional bodies having varied aims and methods of attainment.\textsuperscript{767} This is prevalent in the SADC where ten of its sixteen members simultaneously hold Common Market for Eastern and Southern Africa (COMESA) memberships, comprising the majority of the latter.\textsuperscript{768} While the SADC promotes development as a means to attain regional integration, the COMESA aims to achieve such integration through an eradication of various barriers to trade.\textsuperscript{769} Such overlapping results in states having to implement numerous methods to attain integration for such bodies.\textsuperscript{790}

Given this knowledge, African states should have ensured that the EPA groupings were more in line with existing regional groups and their memberships to avoid compounding such existent issues to a greater degree.\textsuperscript{791} Instead, the situation in the SADC is that the majority of its members are part of the SADC and Eastern and

\textsuperscript{765} Bertelsmann-Scott (note 746 above; 7) and Hansohm and Breytenbach et al (note 276 above; 82).

\textsuperscript{766} Kwa, Lunenborg and Musonge (note 779 above; 12) and Bormann, Busse and De La Rocha (note 739 above; 235).

\textsuperscript{767} Bertelsmann-Scott (note 746 above; 7).

\textsuperscript{768} In addition to this overlap, five of the SADC members also make up the SACU. Mapuva and Muyengwa-Mapuva (note 39 above; 27-28) and Bertelsmann-Scott (note 746 above; 16).

\textsuperscript{769} Mapuva and Muyengwa-Mapuva (note 39 above; 28).

\textsuperscript{790} Ibid.

\textsuperscript{791} Fontagné, Laborde and Mitaritonna (note 738 above; 186).
Southern Africa (ESA) EPA groups with the latter holding seven SADC members. Meyn has argued that such fragmentation of the SADC through the EPAs has left the responsibility of working towards ensuring economic incorporation within the SADC to the SACU states and Mozambique. Thus, varied EPA group memberships will probably detract further from the attainment of regional integration by existing regional groups and now for the EPAs too.

Such overlapping membership has also been regarded as an indication of weak integration within the SADC. This is supported by its failure to form a customs union by 2010, to liberalise 85 percent of trade within the region by 2008 and all by 2012. Furthermore, Bertelsmann-Scott has argued that such deficiency has resulted in those states being unable to negotiate the EPAs from a ‘unified base’, thus rendering them not properly organised for the negotiations. Therefore, its position therein will probably be weakened. In relation to the SADC Trade Protocol, Hansohm and Breytenbach have noted that its implementation has been hampered through the division of the SADC by the EPAs. Again, it could be contended that overlapping regional memberships will probably lead to states struggling to determine where to focus their efforts and resources, thus applying individual resources and efforts either too thinly or in isolated areas only. This in turn could jeopardise the achievement of various groups’ aims with the issue only being increased further by the EPA groups and negotiations.

4.3.3.2 Differences between states

An additional problem that faced the SADC EPA group in the negotiations is the economic and developmental differences amongst members.\(^{802}\) This is evident in the categorisation of South Africa, Botswana and Namibia as ‘upper middle income’ states, Swaziland as ‘lower middle income’ and Angola, Mozambique and Lesotho as ‘Least Developed Countries (LDCs)’.\(^{803}\) The differences between such states is further encapsulated by the fact that the GDP of Botswana, of about 15 700 Euros, is approximately 14 times higher than that of Mozambique, the poorest member of the group.\(^{804}\) Such disparity will probably not only affect regional integration efforts but also the energies put into EPA negotiations and implementation given that states will undoubtedly satisfy individual priorities first before attending to other commitments.\(^{805}\)

4.3.3.3 Dominant role of the EU

Additionally, during the negotiations, certain authors and organisations expressed opinions on the EU’s position therein.\(^{806}\) One such author, Hurt, stated that the EPA relationship cannot be viewed as a partnership given that the EU holds the greater amount of power.\(^{807}\) Similarly, in South Africa, the Congress of South African Trade Unions (COSATU) has expressed its opposition to the EPAs, particularly over the unequal bargaining positions of the parties.\(^{808}\) Support for this view can be found in the fact that the average GDP for the capitals in the SADC region is about a quarter of the EU’s.\(^{809}\) Coupled with the EU’s wealth of resources are its skilful negotiators, which Bertelsmann-Scott has cited as an extra strain on ACP states.\(^{810}\)

The concerns connected herewith are evident in the inclusion of topics in the EPA negotiations known as the ‘Singapore Issues’.\(^{811}\) These include issues of ‘investment, competition, government procurement and trade facilitation’, originally raised in the

\(^{811}\) Hurt (note 65 above; 504).
Ministerial Conference in Singapore in 1996 but strongly opposed by developing states then and now.\textsuperscript{812} Hurt states that such an inclusion was a manipulation of the negotiation plan, with Woolfrey noting that this prevented a prompt conclusion of the negotiations.\textsuperscript{813} The ACP states have expressed the view that negotiation and agreement on such topics in the EPAs is not necessary to render them compliant with the WTO's rules.\textsuperscript{814} Conversely, the EU has skillfully supported such inclusions on the basis that agreement thereon is essential as such issues are key to achieving development.\textsuperscript{815}

Dissatisfaction was also expressed in relation to interim EPAs, wherein it was believed that the EU placed pressure on the states to agree thereto.\textsuperscript{816} This was stated by the ACP Council of Ministers in December 2007 in a ‘unanimous declaration’ to this effect.\textsuperscript{817} Such experiences and concerns over effects of the EPAs on trade and the EU’s aims apparently culminated in it not having finalised any EPAs with the African groups by the beginning of 2008 as originally intended.\textsuperscript{818} Thereafter, when drafts of the final EPAs were determined, Hurt expressed concern over the short time period given to ACP states to deliberate over them.\textsuperscript{819}

4.3.4 Outcomes of the EPA Negotiations

After the initial slow pace of the EPA negotiations, the EU decided to first ensure that interim EPAs, relating only to goods, were agreed upon and signed by 2008 with negotiations for final ones continuing thereafter.\textsuperscript{820} This was done in light of the expiration of the WTO waiver.\textsuperscript{821} By the end of 2007, only 18 of the 46 African nations had initialled such agreements, with such states securing further duty and quota free access to the EU market from this point.\textsuperscript{822}

\end{footnotes}
Despite the problems encountered during negotiations, an interim SADC EPA was initialled by Lesotho, Botswana, Mozambique and Swaziland on 23 November 2007.\textsuperscript{823} Namibia initialled on 5 December 2007 but with reservations.\textsuperscript{824} It was signed by Botswana, Lesotho and Swaziland on 4 June 2009 with Mozambique signing on 15 June 2009.\textsuperscript{825} South Africa did not sign as it wanted to remain bound by the TDCA instead.\textsuperscript{826} As Angola had not brought a ‘market access offer’ to the EU, it was not entitled to initial but was able to continue receiving preferences under the ‘Everything But Arms (EBA) initiative’.\textsuperscript{827} In terms of the interim EPA, all signatories had to liberalise 86 percent of trade while Mozambique only had to liberalise 81 percent thereof.\textsuperscript{828} The signatories also agreed to discuss the topics of services and investment and to negotiate ‘competition and government procurement’ issues upon them first acquiring sufficient capacity to do so.\textsuperscript{829} This Agreement was never ratified though as this process was postponed in 2010 due to the concerns previously raised having to first be dealt with in the final EPA negotiations.\textsuperscript{830}

After approximately ten years of negotiations in total, they closed on 15 July 2014.\textsuperscript{831} Angola remained an observer throughout but has been given the opportunity to participate in the EPA later.\textsuperscript{832} As such, the Agreement was signed by all, except

\end{itemize}
Angola, on 10 June 2016 and has been provisionally implemented since 10 October 2016, bar in respect of Mozambique.\textsuperscript{833} It is being applied as such until all the EU members have ratified it.\textsuperscript{834} The EPA cements the parties’ relationship on an enduring basis, which is important given that the EU is a key trading partner for many African nations.\textsuperscript{835} Its enduring nature is strengthened by its compliance with the WTO’s rules.\textsuperscript{836} While the EU is expected to attain some financial gains through the EPA’s implementation, its global trade will probably not be affected, but for the SADC members there is however potential for increases in both global and inter-member trade.\textsuperscript{837}

Such potential for the SADC members is evident in the EU’s promise to open its markets to a greater extent than required by the former, thus favouring the SADC states.\textsuperscript{838} This was reportedly undertaken in light of the varied developmental statuses between the EU and SADC members.\textsuperscript{839} Connected herewith is the achievement of a standardising of the tariffs charged by the SACU members due to the EPA, which was

\textsuperscript{833} Mozambique ratified the EPA on 28 April 2017 and is currently sending such ratification to the Council of the EU, whereupon the Agreement will also provisionally apply to it. ‘Overview of Economic Partnership Agreements’ (note 772 above), T Fundira ‘Implementing the SADC EPA – challenges and impact’ 1 March 2017, available at https://www.tralac.org/discussions/article/11348-implementing-the-sadc-epa-challenges-and-impact.html, accessed on 8 August 2017, ‘Entry into force of the SADC-EU Economic Partnership Agreement (EPA)’ (note 784 above) and ‘Africa’s external relations’ (note 753 above).

\textsuperscript{834} Ratification of the EPA by the EU states could be ‘complicated’ upon the UK giving its formal notification of withdrawal from the EU in the future. A full discussion of the implications of such notification and withdrawal will not be undertaken in this dissertation due to the word limitations. Fundira (note 833 above) and ‘Overview of Economic Partnership Agreements’ (note 772 above).

\textsuperscript{835} ‘The Economic Impact of the SADC EPA Group – EU Economic Partnership Agreement’ European Commission (note 749 above; 56) and Meyn (note 736 above; 516).

\textsuperscript{836} ‘The Economic Impact of the SADC EPA Group – EU Economic Partnership Agreement’ Tralac (note 747 above).

\textsuperscript{837} Fundira states that the trade benefits accruing to the EU through the final EPA will be 21 times higher than the effects expected for SADC members with trade to the value of 3.6 billion US dollars expected to accrue to it. Fundira (note 833 above), ‘The Economic Impact of the SADC EPA Group- EU Economic Partnership Agreement’ Tralac (note 747 above) and Fontagné, Laborde and Mitaritonna (note 738 above; 181).

\textsuperscript{838} The EU has removed 100 percent of customs duties on all products, except arms and ammunition, imported from all SADC EPA members except South Africa. For South Africa, 98.7 percent of customs will be removed with full removal for 96.2 percent and partial removal for 2.5 percent thereof. SACU only has to eliminate custom duties on 86.2 percent of EU imports, with 74.1 percent being full removal and 12.1 percent being partial. Mozambique is only required to remove such duties on 74 percent of EU products. ‘Economic Partnership Agreement (EPA) between the European Union and the Southern African Development Community (SADC) EPA Group, Key Advantages June 2016’ available at http://trade.ec.europa.eu/doclib/docs/2014/october/tradoc_152818.pdf, accessed on 8 August 2017 and ‘The Economic Impact of the SADC EPA Group- EU Economic Partnership Agreement’ Tralac (note 747 above).

\textsuperscript{839} ‘The Economic Impact of the SADC EPA Group- EU Economic Partnership Agreement’ Tralac (note 747 above).
not being attained prior thereto. In relation to South Africa specifically, it has secured a greater level of market access through the EPA than the TDCA. Under the TDCA the EU liberalised 95 percent of trade with South Africa, whereas it has now agreed to 98.7 percent liberalisation under the EPA. South Africa is however only required to eliminate 86.2 percent of custom duties on EU goods as opposed to the 86 percent requirement of the TDCA.

Further benefits for all SADC EPA members include access to exclusive safeguards in terms of the EPA. Safeguards with ‘flexible activation clauses’ are available, including a ‘general bilateral safeguard’, agricultural, ‘infant industry’ and food security safeguards as well as a temporary one available specifically for Lesotho, Botswana, Swaziland and Namibia for their ‘sensitive products’. Of great importance is the EU’s promise not to subsidise its exported agricultural products bound for the SADC EPA states, as normally undertaken in terms of the CAP. This can all help ensure that the SADC members are able to take full advantage of the Agreement, which is further assisted by the flexibility allowed in the rules of origin. In terms of these rules in the EPA, producers are permitted to source a greater degree of parts or ingredients from beyond their borders while still qualifying for EU preferential market

851 Ibid.
Further, an exporter in a SADC EPA state is now permitted to utilise materials acquired from within any other state that has a trading agreement with the EU. This can encourage the growth of ‘new value chains in the region’.

The projections made by various authors indicate that positive trade results are expected to materialise in the following years owing to the EPA. In comparison to a situation with no EPA in place, imports to the SADC are forecast to be 0.73 percent higher with an EPA while exports from the SADC EPA members to the EU is estimated to be 0.91 percent more. Furthermore, the SADC EPA global exports are projected to increase on average by 0.13 percent while imports to the SADC from the globe could see an average increase of 0.14 percent. Of interest is the expectation of an increase in exports from the white meat industry. The effect of this and other EPA benefits for the states concerned will probably be seen through positive trends in their GDPs.

Generally, it has been forecast that the GDP of the member states will increase on average by approximately 0.03 percent when compared to a projected situation in 2035 with no EPA. A great contributor to this projected figure will be South Africa. It is estimated that the GDP of the states will increase by between 0.01 and 1.18 percent. Connected herewith are concerns of some states over decreases in import duty collections, which contribute to their revenue and upon which they are greatly

dependent. To this end, it has been noted that only Lesotho and Swaziland will not be affected while for others the extent thereof is expected to be limited. This will be due to an anticipated rise in 'economic activity' including imports into such countries. Another positive result stemming from the EPAs includes states not being able to alter economic policies upon changes in government or political views. This, along with member states being required to frequently work together and possibly alter their rules of trade after considering them collectively, could further strengthen regional integration. On the other hand, the EPAs have the potential to reduce states' policy space, thus limiting their discretion in determining how to deal with various issues. In reality, the realisation of regional integration through EPAs seems unlikely due to the complexity of memberships held by such states.

4.4 The attainment of each Organisation’s principles through the EPA

A key aim of the EPAs is to ensure that sustainable economic growth in ACP countries is achieved through increases in trade and regional integration. This is somewhat in line with the SADCs objective contained in article 5.1(a) wherein the aim is for economic development and growth. However, it could be argued that it is not 'self-sustaining development' attained through reliance on each other as required by article 5.1(d) of the SADC Treaty due to the relationship with and market access being granted by the EU. The extent of this dependence is somewhat reduced by the EU’s

---

863 “The Economic Impact of the SADC EPA Group- EU Economic Partnership Agreement’ Tralac (note 747 above) and Fontagné, Laborde and Mitaritonna (note 738 above; 179 and 205).
864 It has been estimated that countries such as Swaziland, where about 47 percent of its national income is derived from customs duty collection, will lose approximately 5.7 percent of such income under the EPA. It is forecast that Congo will lose approximately 33 percent of its tariff income but that this will only account for approximately 7.1 percent of its national income. “The Economic Impact of the SADC EPA Group – EU Economic Partnership Agreement’ European Commission (note 749 above; 54), ‘The Economic Impact of the SADC EPA Group- EU Economic Partnership Agreement’ Tralac (note 747 above) and Fontagné, Laborde and Mitaritonna (note 738 above; 179 and 205).
866 It must be noted that WTO members are required to report changes in their internal trade policies in terms of article D of Annex 3 of the Marrakesh Agreement. Bertelsmann-Scott (note 746 above; 19).

desire to attain such growth with respect for the developmental goals of the states concerned.⁸⁷³ Thus, SADC states can still ensure that their aims are attained using their own methods, such as supporting itself and other members as required by article 5.1(d).⁸⁷⁴

The EU also intends to ensure that through the EPAs and regional integration, poverty is reduced while income and employment is increased.⁸⁷⁵ This satisfies the SADC’s objective in article 5.1(a) of the Treaty to use regional integration as a means to attain such benefits.⁸⁷⁶ Furthermore, the values of human rights, democratic principles, rule of law and good governance, upon which the EPA’s objectives are grounded as confirmed in article 2 thereof, are mostly in accordance with those of the SADC found in article 4(c) of its Treaty, except that of good governance.⁸⁷⁷ Such values are upheld through the threat of imposition of trading sanctions if not respected.⁸⁷⁸ Overall it is evident that the SADC’s aims and values are promoted and attainable through the EPA.⁸⁷⁹ Despite this, SADC states should have attempted to ensure they played a greater role in the formulation of its provisions.⁸⁸⁰ The EU, by guiding the formation of EPAs through the provision of market access opportunities to SADC members, could thereby easily have ensured that such provisions promote its aims and objectives.⁸⁸¹ Thus greater participation by the SADC was necessary to ensure that there is not a repeat of former trade relations where European states reportedly viewed the former

as merely ‘sources of raw materials and markets for finished products’. This is evident under Lomé where the exportation of manufactured goods from ACP states was not met with great tariff cuts by the EU.

Presently, the market access and other opportunities granted under the EPA could nevertheless help increase trade in the SADC states, thus assisting in eradicating poverty, reducing unemployment and increasing the countries’ wealth. Through this, it can be ensured that various human rights are also honoured by the SADC states. This in turn assists in the attainment of the EU and SADC’s objectives, especially the promotion of human rights.

4.5 Recent anti-dumping investigations undertaken by each Organisation against the other

4.5.1 Investigations by the SADC

The SAPA made an allegation that frozen bone-in chicken portions imported from the UK, Netherlands and Germany were being dumped onto the SACU market. An investigation was started on 25 October 2013 with an initial positive outcome being determined. The ITAC’s request for imposition of provisional duties was granted and applied for six months from 4 July 2014 till 2 January 2015. The then applicable customs duty for this product was 37 percent, except where it originated from the EU where no duty was levied in accordance with the TDCA. The investigation covered the year 2012 with injury being investigated over the period of 1 January 2010 to 31

---

887 The SAPA, as the association for the poultry industry, represents producers that are responsible for about 72 percent of the volume of chicken produced in the SACU region. Report No. 492 (note 693 above; 3 and 5) and Cronjé (note 614 above).
888 Report No. 492 (note 693 above; 3).
889 Report No. 492 (note 693 above; 4) and Cronjé (note 614 above).
890 Report No. 492 (note 693 above; 20) and Cronjé (note 614 above).
Information was also collected for an additional year thereafter from 1 January 2013 to 31 December 2013 to determine the 'performance of the SACU industry'.

The ITAC calculated positive dumping margins for all investigated parties, barring certain Dutch producers. Thereafter, for the material injury calculation, an increase in the total amount of imports of this product coupled with decreasing imports of 'non-dumped' products and rises in volumes of the alleged dumped products was found. An issue noted herewith in the report was that in 2010, the first year of the injury assessment period, Germany did not export any of the product concerned to South Africa.

It was pointed out that due to this, the calculation of increases in imports for the remaining years of the investigation, in comparison to that year, produced high results. The ITAC argued that there were no rules to guide this decision and that no validation for its choice was required either. While the WTO Committee on Anti-Dumping Practices has recommended that the investigation period span over three years, such a recommendation was characterized in Guatemala- Cement II as being non-binding on parties as it was not a rule in the ADA. However, it could be argued that the ITAC’s decision does not comply with article 3.1 of the ADA, which requires that fairness be exercised when undertaking the ‘objective examination’ with the evidence provided being objective in nature. One could view the decision to not extend the investigation period beyond three years to reflect Germany’s lack of exports

in 2010 as being unfair to the investigated parties, as this decision probably contributed to the ITAC’s positive material injury finding.\textsuperscript{900}

In relation to the determination of material injury, the ITAC found that it was occurring in various forms.\textsuperscript{901} This included price suppression\textsuperscript{902}; undercutting of SACU prices\textsuperscript{903}; a reduction in profit earned\textsuperscript{904} and return made on investments\textsuperscript{905}; a decrease in use of ‘production capacity’\textsuperscript{906} and a negative impact on ‘net cash flow’.\textsuperscript{907}

Examination of the information relating to the additional period thereafter revealed that the same factors, as noted above, prevailed along with a reduction in production, employment and difficulty being experienced in attaining additional capital.\textsuperscript{908} Furthermore, it was determined that the rise in ‘import volumes’ exceeded the SACU’s local market growth.\textsuperscript{909} A positive determination of material injury was thus made.\textsuperscript{910}

The ITAC, in establishing the causal link as required by article 3.5 of the ADA, compiled a table referring to the relevant factors found in article 3.4 that have to be evaluated.\textsuperscript{911} Therein, an increase or decrease in relation to each factor was noted, accompanied by some form of explanation, unlike in other investigations undertaken in following years.\textsuperscript{912} An example of such association was the linking of price suppression with the decreases in profit, which affected the industry’s ability to recuperate such costs through an increase in prices due to competition from imported products.\textsuperscript{913} Other factors alleged to have added to the injury experienced included

‘labour unrest’, an inappropriate business model being followed and extensive use of brine injecting.\textsuperscript{914} Based on this reasoning, the Commission found a causal link between the dumped imports and material injury to the local industry.\textsuperscript{915} With all the requirements satisfied, a recommendation for the imposition of ‘definitive anti-dumping duties’ on imports of bone-in portions from the three states and certain producers therein was made to the Minister of Trade and Industry.\textsuperscript{916} These duties were to be applied from January to June of 2017.\textsuperscript{917} As yet there is no clear response from the EU in dealing with such matter according to normal WTO processes.\textsuperscript{918}

### 4.5.2 Investigations by the EU

The EU undertook an investigation into allegations of dumping of electrolytic manganese dioxides originating from South Africa, where provisional duties were initially imposed.\textsuperscript{919} This product is used in the production of cell batteries.\textsuperscript{920} The

\textsuperscript{915} Report No. 492 (note 693 above; 83).

\textsuperscript{916} The Commission recommended that a 31.3 percent duty be imposed on the product imported from the listed German producers while a 73.33 percent duty be imposed on such products produced by other German poultry producers exported to the SACU. For Netherlands, a 3.86 percent customs duty was recommended for the listed producers while a 22.81 percent duty rate was to be imposed on other Dutch producers whose product was imported into the SACU. For the imported product of the producers of the UK involved in the investigation, a 12.07 percent duty was proposed and a 30.99 percent customs duty on all other producers. Report No. 492 (note 693 above; 19) and ‘Anti-dumping duties imposed on frozen chicken portions imports’ (note 914 above).

\textsuperscript{918} ‘Disputes by Member’ available at https://www.wto.org/english/tratop_e/dispu_e/dispu_by_country_e.htm, accessed on 23 October 2017.

\textsuperscript{920} Ibid para 6.
investigation was conducted from 1 October 2005 till 30 September 2006, wherein it was determined whether injury was suffered between 1 January 2002 and 30 September 2006. 921 During such period, using the weighted average method, a dumping margin of 17.1 percent was calculated. 922 A positive injury finding was thereafter made. 923

For determination of the causal link between these two requirements, the Council considered a wide range of factors. 924 It reasoned that imports of the same product from the People’s Republic of China (PRC) did not contribute to the alleged injury as they were of low volumes owing to a user’s difficulty and the costs associated with changing providers. 925 The relocation of a major user of the product from the EU to the PRC was also excluded as a contributing factor to the injury as decreases in sales amounts as a result therefrom reportedly only accounted for a small extent of total decreases experienced. 926

The South African producer, Delta, alleged that the low prices of its products was attributable to the comparative advantage it enjoyed and so increases in raw materials did not affect its price greatly. 927 This would be possible due to its reportedly close proximity to the mines, the source of the product, and its ‘advantageous contractual conditions with the supplier’. 928 The Council rejected this factor as being ‘irrelevant to the causality examination’ as dumping had been proven. 929 It does not appear to clearly refute the argument being made that such an advantage exists, which is a plausible reason for the lower prices. 930 Such action could be indicative of the Council attempting to protect its industry through anti-dumping measures. 931 This would be in accordance with the concerns raised by Issabekov and Suchecki that such measures are used in respect of products for which a comparative advantage is being lost. 932 This is evident here given that the EU’s main electrolytic manganese dioxide producer,
Tosoh, is struggling to compete with the lower prices of the South African producers.\textsuperscript{933} This is bolstered by the fact that such producers are of a limited number and that the product can only be used for certain purposes.\textsuperscript{934}

In terms of the Community’s interest, the additional factor considered by the Council, it was determined that key local producer, Tosoh, should be prevented from closing down.\textsuperscript{935} The reasons provided for this were that Delta’s below cost prices were unmaintainable and so Tosoh would be able to compete again should such prices be increased.\textsuperscript{936} Furthermore, the difficulty and costs associated with changing product suppliers and the requirement of having to test the suitability of it, reportedly placed the supplier in a strong bargaining spot.\textsuperscript{937} It was argued that Delta’s position would have been strengthened even further should Tosoh not have operated anymore, thus placing users at Delta’s mercy.\textsuperscript{938} The Council determined that the requirements for dumping had been satisfied.\textsuperscript{939}

An offer to make undertakings was rejected on the grounds that it would not alleviate the harm caused.\textsuperscript{940} This was reportedly due to changes in prices of other raw materials used in batteries that could increase the price of the goods produced.\textsuperscript{941} Additionally, it was noted that the formulation of a price through such undertakings could lead to it becoming a ‘reference price on the market’, thus decreasing competition amongst producers.\textsuperscript{942} The Council therefore decided to impose a ‘definitive anti-dumping duty’ of 17.1 percent on South African imports and to ‘definitively collect’ those amounts charged and collected as provisional measures.\textsuperscript{943} In February 2014, a decision was taken to keep such duties in place for a further five

years. According to normal WTO processes, there appears to be no clear response as yet from South Africa on this matter.

4.6 Concluding remarks

In relation to anti-dumping, it appears that both the SADC and EU use it somewhat as a protective means for their industries. In respect of the EU, such is seen in the implementation of duties on imported products where a comparative advantage is being lost or is lacking in respect of the locally produced equivalent. It is also evident in the greater ease at which a complaint can be considered. For the SADC, such approach is evident in multiple investigations into allegations of dumping in the poultry sector having been initiated over the years. However, with research undertaken by Brink in 2005 indicating that only the SACU has anti-dumping legislation in place, it could be said that the effect of the SADC’s actions in this respect has a limited effect on its relationship with the EU.

Despite such approaches, both parties have been able to ensure that their goals and values are recognised and will be given effect to through the EPA, especially for the SADC. Furthermore, the WTO’s aims and rules are also being upheld. For the SADC however, certain internal issues such as overlapping regional organisation membership and varied economic and developmental differences could hamper the implementation of the EPA. Notwithstanding this, its EPA members have successfully concluded an enduring formal agreement with a key trading partner, thus

cementing such relationship. Additionally, the EU has granted greater benefits than that required of the SADC members, seen in its superior market opening promises and the various safeguard options for the SADC members. Such benefits, along with an expected rise in the SADC states’ GDP, indicate that the relationship is a positive and rewarding one for SADC EPA members.

It can be argued that anti-dumping practices of both parties have not negatively impacted on their relationship, despite it being noted as more of a concern for the SADC. Such lack of effect could be attributed to the fact that the EU enjoys superiority in the EPA, due to it not being dependent on it to the extent of the SADC states and that its global trading levels will not be affected thereby.

Chapter 5: FINDINGS, RECOMMENDATIONS AND OVERALL CONCLUSION

5.1 Research findings

This dissertation centred around a discussion of the ADA with special focus on the SADC-EU EPA, concluded in June 2016.\textsuperscript{959} The analysis was undertaken with the broad aim of determining the effect of the ADA on relations between the SADC and EU and formulating recommendations for the development of the SADC members’ poultry sectors, specifically that of South Africa.

In order to satisfy these main objectives, numerous underlying questions had to first be answered. In chapter two it was determined whether development of the multilateral trading system, since the GATT, had any effect on the increased numbers of regional organisations, particularly the SADC. Generally, the research indicated the existence of such effect.\textsuperscript{960} For the SADC’s predecessor, the SADCC, it was the persisting difficulties in such states and those encountered when attempting to participate in this system that hindered their involvement, leading to the organisation’s formation.\textsuperscript{961} Its creation was viewed as a means to resolve such issues as noted on pages 36 and 37 of chapter two.\textsuperscript{962} The success of the SADCC and then the SADC in this regard was limited.\textsuperscript{963} Significantly, it was also found that the growth in these regional organisations could be associated with the increased use of anti-dumping measures during such time.\textsuperscript{964} This was due to the advances in anti-dumping laws largely taking place around the same time as the waves of regionalism.\textsuperscript{965}

Such increased use of anti-dumping measures necessitated a uniformed approach to the application of Article VI, an issue not solved by prior Codes.\textsuperscript{966} The ADA was thus

\textsuperscript{959} ‘Entry into force of the SADC-EU Economic Partnership Agreement (EPA)’ (note 784 above).
\textsuperscript{960} This was determined on pages 37 to 38 of chapter 2. Picker (note 219 above; 275).
\textsuperscript{961} This was discussed on pages 35 and 36 of chapter 2.
\textsuperscript{962} Darku and Appau (note 211 above; 47), Ndlovu (note 214 above; 187-188) and Mansfield and Reinhardt (note 209 above; 835 and 838).
\textsuperscript{963} A discussion of this is contained in pages 31 to 32 and 34 to 35 of chapter 2.
\textsuperscript{964} This can be found on page 38 of chapter 2 with a discussion of the development of international anti-dumping law found on page 18.

formulated as stated on page 23 of chapter two although numerous issues therewith were highlighted in chapter three. In consideration of the ADA’s effect on the SADC states’ poultry industries, most notably South Africa’s, varied approaches by such states to the ADA were also discovered in chapter three. It was found that South Africa had been affected by the ADA to a larger extent than other SADC states. This was mainly due to its attempts to comply with the ADA by implementing the ITA Act. However, in seeking to uphold compliance, with efforts being questionable at times, South Africa has not been able to provide the assistance demanded by the poultry industry. In contrast, other SADC states appear to have provided protection seemingly without regard for most notably the ADA’s requirements.

Further to this, the next question investigated in chapter four was the extent to which anti-dumping practices have affected the relationship between the SADC and EU. It was determined that despite the apparent use of anti-dumping measures to protect their industries and the investigations undertaken against each other, their relationship has thus far not been negatively affected. This was determined in light of their current EPA negotiations, with the EU dominating the relationship and only the SACU members reportedly having anti-dumping legislation to facilitate such action against the EU, thus limiting effect thereof on the EU. The EPA formulated was noted as being potentially beneficial to the SADC although certain persisting internal issues could hamper this. However, importantly, through it the parties take cognisance of

and endeavour to realise their values and objectives. This also indicates consideration of the needs and constraints of the SADC members, which is imperative given the issues facing the South African poultry sector.

The main reason underlying this research is the problems currently facing such industry. Due to the allegedly cheaper imports coming into the country, the local poultry industry is struggling to compete, with concerns arising especially over the resulting job losses. Other factors have also compounded such problems, including the drought which has increased prices of animal feed constituents such as maize. Additionally, the recent outbreak of avian influenza, reportedly affecting five of the country’s provinces, is resulting in decreases to viable output.

Problems in poultry need to be addressed given the dependence of other industries on it and its contribution to South Africa’s food security. To attain any development and positive results, it is recognised that along with recommendations for reform at the WTO level, changes are also required on regional, state and industry level. The main goals of the South African industry, thus also influencing its actions, should first be to produce poultry products of sufficient quantities and at competitive prices so to contend with imports and secondly to thereafter produce sufficient quantities to export abroad.

983 This recommendation and others pertaining to the poultry industries of the SADC states are made in relation to frozen bone-in portions as defined in footnote 647 on page 66.
5.2 Recommendations for improvement of the ADA

As mentioned above, numerous issues with the ADA have arisen, which South Africa can highlight and suggest improvements for.984 These recommendations are formulated to ensure that members of regional groups, such as the SADC, and their industries are shielded from unnecessary investigations and imposition of dumping duties in the future. This is due to the adverse consequences of such actions for developing and least developed states as noted in chapter three.985 Furthermore, with this basis, developed states could also be influenced to support such suggestions in order to reduce investigations initiated against them too.

In relation to article 2 of the ADA, numerous improvements can be suggested, including the formulation of a more precise definition for the term ‘reasonable profit’ in article 2.2.986 This could be achieved by creating guidelines containing factors to be used in determining reasonable profits. Such factors could take cognisance of the various industries, economic positions and value of applicable currencies. By doing so, it can help ensure that the reasonable profit determined is more accurate and related to the circumstances that it is normally determined within. This would reduce the discretion afforded to investigating authorities.987 Meanwhile, the proposal that all the sales of the exporters concerned be used could also remedy this issue.988

Additionally, an adaptation to article 2.4 in relation to allowances could be proposed.989 It can be suggested that allowances only be permitted upon production of documentation to the investigating authorities showing the incurring of those extra costs by such parties.990 This could be achieved by amendment to the ADA or a recommendation by the Committee on Anti-Dumping Practices, although the latter will not be binding on members.991 These improvements could ensure that the chances of

984 See pages 41 to 59 of chapter 2 for a full discussion of the important provisions of the ADA including the concerns raised and recommendations made in relation to each one discussed. Satapathy (note 416 above; 2212), Adamantopoulos and De Notaris (note 379 above; 48 and 51), Pangratis and Vermulst (note 150 above; 70) and Prusa (note 47 above; 696).
985 UNDP (note 382 above; 189).

991 This concern was noted on pages 54 of chapter 3. Guatemala- Cement II (note 461 above; para 8.266).
a positive dumping finding and the margins calculated are not manipulated to be artificially higher through the use of excess discretion afforded to authorities.\textsuperscript{992}

Another key issue associated with article 2 is the practice of zeroing, which ought to be addressed by the WTO members.\textsuperscript{993} This is due to the case law only being applicable to the parties involved and such states not being obliged to alter their legislation or practices despite case findings as noted by Satapathy.\textsuperscript{994} Additionally, this practice is concerning given that it increases chances of a positive dumping determination and amplified dumping margins.\textsuperscript{995} This allows states to protect their industries at the expense of those of another.\textsuperscript{996} The suggestion of Trebilcock and Jones to ban this practice, in line with determinations in the applicable cases, through an amendment to the ADA can be proposed by developing countries including South Africa.\textsuperscript{997} This could instil greater certainty into the ADA through a reduction in the discretion granted to authorities.\textsuperscript{998}

For article 3 of the ADA, requests for greater clarity and explanation of methods used and key terms therein have also been made.\textsuperscript{999} Due to the extensive case law covering this article, thus providing a sufficient set of guidelines for states, an amendment thereto does not appear to be of immediate concern as with article 2.\textsuperscript{1000}

There are two key concerns relating to article 5 that could possibly be brought to the WTO’s attention. Concerning article 5.3, it can be recommended that further guidelines on what qualifies as ‘accurate and adequate evidence for initiating an investigation’ be provided.\textsuperscript{1001} This would be warranted by the lack of clear guidance in the applicable case law.\textsuperscript{1002} Furthermore, the proposal of Adamantopoulos and De Notaris that an

\textsuperscript{1001} EC- Bed Linen (note 476 above; para 6.198), UNCTAD (note 399 above; 28) and Macrory, Appleton and Plummer (note 92 above; 511).
\textsuperscript{1002} See page 52 of chapter 3. Mexico- HFCS (note 454 above; para 7.94), UNCTAD (note 399 above; 28), Thailand- H-Beams (note 480 above; para 7.77) and Macrory, Appleton and Plummer (note 92 above; 511).
investigation request not be considered if both the product and country were investigated in the preceding year on that same party’s request, can be taken further by South Africa.\textsuperscript{1003} This would help ensure that states, especially developing ones, avoid being subjected to numerous investigations in quick succession, thereby depleting their limited resources and increasing the chances of another gaining protection for their industry.\textsuperscript{1004}

Thereafter, in relation to the \textit{de minimis} dumping and injury standards, article 5.8 should be amended to reflect the Committee’s recommendation concerning time periods used in such calculations.\textsuperscript{1005} This is necessary given that such periods can be altered to ensure \textit{de minimis} standards are met, thereby warranting initiation of an investigation.\textsuperscript{1006} While numerous suggestions have been proposed to otherwise reduce investigations, those of Adamantopoulos and De Notaris in this respect could be brought before the WTO by South Africa.\textsuperscript{1007} They proposed that consultations between parties be held before an investigation is undertaken to gauge whether the evidence presented is of sufficient quantity and quality.\textsuperscript{1008}

This proposal has merit as it could influence states to consider an application carefully before acting upon it, thereby reducing the number of investigations.\textsuperscript{1009} It would be especially beneficial to developing states and LDCs who sometimes have difficulty participating therein and the negative consequences of duties on their industries and economies.\textsuperscript{1010} Additionally, it can provide such states with the opportunity to make any applicable negative consequences known to the investigating state for consideration before a decision is made.\textsuperscript{1011} Another mechanism to protect developing states and LDCs is to request that developed WTO members only investigate dumping allegations concerning the former if the alleged dumping is affecting ‘an essential interest’ of theirs.\textsuperscript{1012} This will ensure that investigations against such states are only

pursued as a last resort and when serious concerns warrant it. Furthermore, it would probably be acceptable to developed states as it does not require much of them in giving effect thereto.

The improvement of article 15 is essential to ensure that developed states implement it and in the appropriate manner. It is also critical for developing countries and LDCs, such as those comprising the SADC, as it can assist in protecting their important industries.\textsuperscript{1013} The satisfaction of the obligations in article 15 could be made mandatory so that developed members can be held accountable.\textsuperscript{1014} While this would be the most appropriate manner to achieve this outcome, developed states may oppose it. Developing and LDC states could otherwise benefit from a precedent or standard form created by the Committee stating what information is required for an investigation and questions that could be posed to the parties.\textsuperscript{1015} This would assist such states as it requires fewer resources to conduct an investigation and will also be appealing to developed states as it does not require great effort.\textsuperscript{1016} It must be recognised though that changes to the ADA alone will not yield great results for the poultry sector in particular.

5.3 Recommendations for regional level

In order to assist the poultry industry, changes should be initiated within the SADC. This ought preferably to be attended to first, before recommendations for the ADA’s improvement as it could help the SADC to take full advantage of any consequential changes adopted by the WTO. In this regard, it must be recognised that the SADCC’s work was hindered by a lack of dedication from members, amongst other factors, leading to an inability to attain its goals.\textsuperscript{1017} This is also evident today in the issue of overlapping memberships held by African states plaguing its successor and other African regional groups as discussed in chapter four.\textsuperscript{1018} The SADC, owing partly to this factor, has also been characterised by its failures to attain goals, such as

\textsuperscript{1013} Vermulst (note 402 above; 216) and Macrory, Appleton and Plummer (note 92 above; 525).
\textsuperscript{1014} Satapathy (note 416 above; 2212) and Adamantopoulos and De Notaris (note 379 above; 59).

\textsuperscript{1018} See pages 84 to 85 of chapter 4. Bertelsmann-Scott (note 746 above; 7).
becoming a customs union by 2010. Issues associated herewith are now further exacerbated by the varied nature of the EPA affiliations in recent years.

The optimum solution for the issue of EPA memberships would have been for African states to have followed the EU’s advice to match such groupings with existing regional memberships. This could have been attained through greater preparation by states before the EPA negotiations. The suggestion of attempting to achieve this now through EPA members changing groups would not be realistic as it would take too long to implement, cause great confusion and result in states being bound to EPAs that they did not help formulate. On a more practical level, the SADC regional group could rather encourage members not part of its EPA group to work towards the attainment of goals and values shared by both former groups in their own EPA groups. This would only be applicable to those EPA groups still negotiating their agreements, namely the ESA and Central Africa. In this, the SADC regional group can at least ensure that its members are working towards common goals and means of attaining them, such as development and regional integration.

In conjunction with overlapping memberships, the SADC could address its issue of overambitious goals. To this end it is recommended that greater caution be exercised when setting future goals. Its failure in this respect could indicate its inability to recognise the extent of resources held by and those issues facing its members, thereby hampering their abilities. By improving this, states could be driven to work towards attaining such goals as they could be within their reach and not too demanding on their resources. The issue of scarce resources could be addressed by the SADC focusing on increasing regional integration, key for its developmental aims, through the encouragement of its members to reduce regional organisation

1026 Ibid.
memberships.\textsuperscript{1027} This could free resources and focus attention on a reduced number of goals and means to attain them.\textsuperscript{1028}

Implementation of such proposals could assist in allowing other issues, such as anti-dumping, to be properly addressed by the SADC members. In relation to the reported lack of anti-dumping legislation in place amongst them, bar the SACU members, this should be rectified in order to bring about greater certainty and uniformity herein.\textsuperscript{1029} If followed it will introduce increased credibility to actions taken by member states in response to allegations of dumping and ensure conformity with the ADA as required by the SADC’s Trade Protocol.\textsuperscript{1030} This is proposed in light of the direct measures taken by many SADC EPA members in response to issues facing their poultry industries, such as with Namibia apparently restricting import quantities without first conducting an investigation.\textsuperscript{1031}

Recognising the scarcity of most SADC members’ resources, the SADC itself could formulate a guide as to what the anti-dumping legislation in each state should encompass.\textsuperscript{1032} The existing ITA Act could be a guide in this respect.\textsuperscript{1033} It accords with Brink’s suggestion that each state introduce its own anti-dumping legislation, possibly following a guideline to achieve some uniformity.\textsuperscript{1034} It is encouraged that such action be taken in the next five years given the current practices of some EPA members noted above and the general advanced stages of the EPA negotiations. Thereafter, it is recommended that SADC members undertake implementation of this

\textsuperscript{1027} Ibid 28.
\textsuperscript{1028} Bertelsmann-Scott (note 746 above; 7).
\textsuperscript{1029} This was noted on page 59 of chapter 3. Brink (note 551 above; 19), ‘Trade Policy Review, Trade Policies and Practices by Measure’ (note 573 above; 32), ‘Trade Policy Review: Mozambique’ (note 573 above) and Voon (note 92 above; 441).

\textsuperscript{1031} See pages 67 to 68 of chapter 4 for further information. ‘Namibia Introduces Poultry Meat Import Quota’ (note 652 above).
\textsuperscript{1032} This collective action is important as it can help ensure that some of the objectives and obligations voluntarily undertaken by the SADC members in terms of the SADC agreements are honoured and implemented. This includes article 4(b) of the SADC Treaty whereby states agreed to strive towards the objective of attaining ‘solidarity’ through such act and ‘complementarity between national and regional strategies and programmes’, which can both be attained through the formulation of this guide. Additionally, member states can ‘contribute towards the improvement of the climate for domestic, cross-border and foreign investment’ as undertaken in terms of article 2(3) of the SADC Trade Protocol. Importantly, such a guide can also ensure that all member states honour the promise in article 18 of this Protocol to ensure that if anti-dumping legislation is formulated and implemented by them that it is ‘in conformity with WTO provisions’. Kwa, Lunenborg and Musonge (note 779 above; 9 and 59).
\textsuperscript{1033} Brink (note 551 above; 19).
\textsuperscript{1034} Ibid.
legislation in the following five to ten years. Furthermore, the SADC could formulate its own investigation body to assist members in conducting investigations.\textsuperscript{1035} This is warranted by the technical nature of the ADA requirements, which would be concerning to such developing states and LDCs.\textsuperscript{1036} These suggestions should be implemented alongside measures created to address specific issues facing the SADC members’ poultry industries to ensure maximum growth therein.

5.4 Recommendations for state level and the South African poultry industry

5.4.1 EPA safeguards

In order to address pressing concerns, particularly in the South African poultry industry, a short term, fairly quick and accessible solution can be found in the EPA.\textsuperscript{1037} The SADC EPA members can look towards utilising the safeguards found therein in the current or following year.\textsuperscript{1038} Given that such allowances were granted by the EU and the beneficial nature of the EPA towards the SADC members, use thereof will probably not affect their relationship negatively.\textsuperscript{1039} Furthermore, it could be argued that activating such safeguards is vital to ensuring that SADC members are not used by the EU as a source of materials and a market for its goods but rather that the former attains meaningful benefits from the EPA.\textsuperscript{1040} There are a number of safeguards that can be employed to protect the poultry and associated industries from failing, whilst ensuring that the EPA works in favour of the SADC members.\textsuperscript{1041} First, the general bilateral safeguard would be available to all the SADC EPA states should increases in EU poultry imports be causing some form of injury listed in article 34(2) to the industry.\textsuperscript{1042} Secondly, the food security safeguard would also be applicable to members if they can prove that their food security is being

negatively affected by increased import quantities.\textsuperscript{1043} Thirdly, the transitional and infant industry safeguards could provide much needed relief to those states not as developed as its unique partner, South Africa.\textsuperscript{1044}

### 5.4.2 South Africa and its trading agreements with the EU

As noted from both chapters two and four, South Africa has a distinctive role in the SADC given its comparatively advanced developmental status and its trading agreements with the EU.\textsuperscript{1045} While the TDCA will be replaced by the EPA when the latter is fully implemented, they are currently both being implemented.\textsuperscript{1046}

The application of these two somewhat contradictory agreements needs to be addressed.\textsuperscript{1047} As such, it is proposed that South Africa consult with the EU in the coming months with a view to suspend the TDCA until the EPA is fully implemented, pending a more formal solution being determined. This should be undertaken while allowing the EPA to continue being provisionally applied.\textsuperscript{1048} Such proposal is viable given that the TDCA has been fully implemented since 2012.\textsuperscript{1049} It could also help ensure that the SADC EPA members are prepared for the full implementation of the EPA by using this time to alert various stakeholders to it and its consequences. Furthermore, it will ensure that the reason for South Africa entering the EPA negotiations, namely to avoid a duplication of agreements applicable to SACU, is

\textsuperscript{1043}Article 36 of the SADC-EU EPA.

attained.\textsuperscript{1050} Such a streamlining of the states’ focus and regional efforts can only be beneficial towards development and regional integration.\textsuperscript{1051}

5.3.3 Proposals for the poultry industry specifically

On an industry level, there are numerous schemes that can help address the issues facing the poultry industry. While the main focus will be on South Africa, such recommendations could also be implemented in other SADC states. In South Africa, continued assistance and support from the government, particularly the Department of Agriculture, Forestry and Fishing (DAFF) and the DTI, is required.\textsuperscript{1052} Some assistance has already been given with the development of the task team to investigate the industry’s problems.\textsuperscript{1053} It has been reported that while progress is being made in formulating short term measures, these have not yet been finalised.\textsuperscript{1054} Once finalised, they have to be sent to the relevant Ministers for approval.\textsuperscript{1055} Ideally, this should be completed before the end of 2017 so that implementation could possibly begin in 2018, given the seriousness of the concerns. In the meantime, other proposals in this regard should be put forward.

The first concern and aim for the poultry sector that should be addressed is its ability to compete with cheaper imported products.\textsuperscript{1056} According to Mujahid, in order to do so and thereby attain stability in the economy, ‘world class goods and services at most competitive rates’ are required.\textsuperscript{1057} South African producers are however currently faced with ‘high input costs’ in respect of electricity, feed and labour.\textsuperscript{1058} Additionally, poultry producers do not receive any governmental aid.\textsuperscript{1059} This should to be altered to help develop and assist the industry.

\textsuperscript{1050} Hurt (note 65 above; 502-503), Creamer (note 784 above), Braude (note 349 above; 74) and ‘Entry into force of the SADC-EU Economic Partnership Agreement (EPA)’ (note 784 above).

\textsuperscript{1051} Mapuva and Muyengwa-Mapuva (note 39 above; 28).

\textsuperscript{1052} Other relevant government departments at national, provincial and local levels can also assist in the provision of the necessary support and assistance.

\textsuperscript{1053} ‘Government Committed to Resolve the Poultry Crises’ (note 24 above).

\textsuperscript{1054} ‘Poultry task team making headway’ (note 24 above).

\textsuperscript{1055} Ibid.

\textsuperscript{1057} Ibid.

\textsuperscript{1058} Cronjé (note 614 above).

To obtain any immediate relief, it is recommended that measures be implemented in industries which supply poultry with essentials to reduce the ultimate cost of poultry products.\textsuperscript{1060} Most importantly would be those who produce the constituents of animal feed.\textsuperscript{1061} The extent of the involvement in the feed industry was highlighted in chapter one and is illustrated by the ingredients in feed for chickens bred for egg-laying.\textsuperscript{1062} Thus, it is of primary importance that support structures be implemented for such key industries, especially maize production since it also forms part of the population’s staple diet.\textsuperscript{1063}

The DAFF and DTI additionally need to ensure that farmers in the maize industry specifically can access technical and financial assistance where necessary. It is proposed that this be established and implemented within the next two years with a view to optimize maize production, thereby reducing costs. Such reductions can be passed along to other industries, thus ensuring food security and probably stability in the economy too.\textsuperscript{1064} Additionally, it can assist in creating jobs which is vital for the South African economy.\textsuperscript{1065} Once attained, other proposals for both the short and thereafter the long term can be implemented in the poultry sector.

To address the lack of competitive poultry produced in the short term, financial and technical support could be extended to certain small-medium and medium sized established poultry farmers.\textsuperscript{1066} The goal should be to develop such producers from this size to large scale commercial ones through the improvement of their skills and facilities. Due to such producers already being participants in the industry and somewhat established therein, results from such assistance could be seen quicker. Ideally, this should be undertaken over an implementation period of four to five years.

\textsuperscript{1060} Davids and Meyer (note 9 above; 22) and Boshoff (note 11 above; 3).
\textsuperscript{1061} Davids and Meyer (note 9 above; 22) and Boshoff (note 11 above; 3).
\textsuperscript{1064} Mujahid (note 1056 above; 7).
\textsuperscript{1065} Menon (note 979 above).
\textsuperscript{1066} Bolton (note 1059 above; 21).
Increased and cheaper production could thus be achieved quicker as when compared to the development of poultry producers from the beginning. However, the DAFF and DTI will need to assist by developing criteria for the attainment of such assistance as well as locate or train advisors for this industry. These advisors must be able to confer advice and provide training to such farmers that will promote the development of their enterprises. Such short-term measures proposed will be in compliance with the rules of the WTO.

In the long-term, similar assistance can be given for the establishment of poultry farmers in rural areas across the country. It is recommended that this be implemented immediately with a view of continuing support over approximately ten years, reviewed thereafter. The first step would be to determine the size of a profitable poultry farm able to provide sustainable living to an average sized family. With this in mind, the overall goal must be for such farmers to initially supply poultry products to meet the demand of the local area. Thereafter these farmers should be advanced to the stage where they can supply shops in nearby areas and abattoirs should they choose to produce processed products.

In order to determine where to establish such farms, the DAFF and DTI need to locate areas with a high demand for poultry products that is not being met. There must also be an interest amongst the community to establish such businesses. This can be seen in the presence of informal producers or new entrants to the market of a rudimentary size. Such is necessary to ensure that the assistance and advisory services provided will be well received and result in incremental development of the farms over time.

This is essential to ensure sustainable development, with participants being able to

---

1067 Smith (note 1062 above; 120).
learn valuable skills to further such sustainability. This plan would also be WTO compliant.

In conclusion, it has been found that while the ADA is in need of various alterations and improvements, its implementation by the SADC and EU has not affected their relationship negatively. This is seen by their recently concluded EPA which appears to be favourable to the SADC members. However, in order to protect South Africa’s poultry industry specifically and other dependent sectors from failure due to cheaper imports, changes also need to be implemented on a regional, state and industry level. This is necessary despite the purpose of the ADA being to enable states to protect their industries from alleged dumping by others.

Dear Ms Gillespie,

Protocol reference number: H55/0953/017M

Approval Notification – No Risk / Exempt Application
In response to your application received on 27 June 2017, the Humanities & Social Sciences Research Ethics Committee has considered the abovementioned application and the protocol has been granted FULL APPROVAL.

Any alteration/s to the approved research protocol i.e. Questionnaire/Interview Schedule, Informed Consent Form, Title of the Project, Location of the Study, Research Approach and Methods must be reviewed and approved through the amendment/modification prior to its implementation. In case you have further queries, please quote the above reference number.

PLEASE NOTE: Research data should be securely stored in the discipline/department for a period of 5 years.

The ethical clearance certificate is only valid for a period of 3 years from the date of issue. Thereafter Recertification must be applied for on an annual basis.

I take this opportunity of wishing you everything of the best with your study.

Yours faithfully

Dr Shamila Naldoo (Deputy Chair)
